Preface to the Revised Edition

The present extensive revision was completed by Vincent Jones. Much new material is added in chapters I - VIII, new melodies for harmonization are included, and there are additional examples for analysis. The technique of combined melody and figured bass has been continued from the revised edition of Part I and should aid the student in developing compositional skill.

The most important addition is the exposition of the Twelve Tone Row Technique written by Dr. Frederick Zomzely with limited participation by Dr. Jones. This should serve as an introduction to more detailed study of this type of composition which has become an influential aspect of contemporary music.

The material in chapters IX - XVII has not been revised to any extent, as this section of the text represents the ideas of the original author, Carolyn Alchin.

Another addition is an Appendix in which solutions of various exercises in the text are included, and there are three short compositions illustrating the Twelve Tone Row Technique designed to aid students in their study of the serial type of composition.

Dr. Jones frequently acknowledged the helpful suggestions of Mr. Walter Kob, Associate Professor of Education at New York University. Both he and the undersigned have taught the material in their respective schools.

Suggestions to the Teacher.

Following the principles of Part I, all new chords are introduced through examples from music literature.

Singing Drills.

The quality of the new chord is perceived aurally through singing drills. The *melodies* are given for individual work and for self help. The *three part exercises* are given for use in classes which are composed exclusively of girls. When possible the teacher should dictate the parts, rather than allow the class to sing from the text. The ear is usually more keen when the eye is not involved. For example: using No. 3 of Ex. 24, the teacher will dictate as follows:

Sopranos—do, do, do, ti, do.

Second Sopranos—so, si, la, so, so.

Altos—mi, mi, fa, fa, mi.

The students memorize the parts as dictated and then sing the three parts together. After singing, the students refer to the text. The same procedure is adopted for the exercises in four parts.

Keyboard Practice.

The exercises given provide ample drill in this phase. Chord progressions should be played *rhythmically* even when not indicated in the text. The patterns can be played in several different rhythms. The accompaniment forms included in various chapters can be used with two pupils at the piano, one playing the accompaniment while the other extemporizes a melody. The singing drills provide easy material for transposition at the keyboard.

Creative Work.

The accompaniment forms serve merely as a stimulus to the creative impulse. Students play the various forms and sing or hum a melody, allowing the harmonies to aid in the creative process. When a melody is satisfactory it is written and then criticised from the angles of (1) unity, (2) variety, (3) balance, (4) good or bad skips, etc. Write melodies for various instruments. For example: try the following melodies with the accompaniment forms indicated.

(a) Violin

Try this with No. 1 of Ex. 52.

(b) Cello

Try this with No. 2 of Ex. 52.

Melody Harmonization.

The melodies of Chapters I-VIII are graded in difficulty and definitely illustrate the chords discussed in the particular chapter. The melodies in Chapters IX-XVII are longer and present more difficult problems in form and style.

In every case:

1. Sing the melody; discuss tempo and general style of harmonization.
2. Find the cadences and discuss their relative importance in the rhythmic structure.
3. Select the chords for the cadences in relation to the rhythmic demand.
4. Discuss the harmonic regulation of each phrase and determine whether it is mostly diatonic or chromatic.
5. Select the chords and *inversions*; write the bass.
6. Add the inner parts and appropriate bytones.

Analysis.

The work in analysis should never end with mere recognition and spelling of the chords involved. The excerpts given provide material for class discussion of the *musical effects* achieved with certain harmonies. Analysis can be done in several ways. The teacher may analyze excerpts *with* the class, or students may work alone and report to the class. Some information concerning the composer and his harmonic style should always be given. From the examples in the text students should eventually acquire a concept of the harmonic styles prevailing at certain periods of musical development. When the appreciative phase is to be emphasized, the teacher should play longer sections of the music from which the excerpts are taken, concentrating upon the *general effect* rather than upon details.

Chapter I.

Modulation.

In chapters 17-18 of Part I, modulation to closely related keys was effected in several comparatively simple ways. It is possible to modulate to the dominant key by other methods. For example: after establishing the original key, enter the dominant key on a weak pulse thru each of its chords, following the order indicated in Ex. 1. Then complete the section in the new key as desired.

		original key		new key (dominant)	
Ex. 1.	1.	I	V ₇	I	I etc.
	2.	I	V ₇	I	V etc.
	3.	I	V ₇	I	IV I etc.
	4.	I	V ₇	I	ii etc.
	5.	I	V ₇	I	vi ii etc.
	6.	I	V ₇	I	iii vi etc.
	★7.	I	V ₇	I	vii ⁵ etc.

Ex. 2 shows two of the above modulations in four part harmony. Nos. 1, 2, 3 and 4 were discussed in Part I.

Ex. 2.

G: vi G: iii 3

Experiment with modulations to the subdominant key using the patterns of Ex. 1. It is less satisfactory to enter the new key thru IV or ii as these chords are not found in the original key.

When modulating to the relative minor, it is best to enter the new key thru i, iv, V₇ or VI. Try these progressions at the keyboard and write four measure originals employing the same patterns.

Common Chord Modulation.

The foregoing has been largely modulation by common chord. Find all the chords in the key of G which also belong to the key of C. The only chords not common to C are those which include the scale 7th (f#). The only chords in C which do not belong to G are those which include the scale 4th (f).

1. Find the common chords of C and its subdominant, F.
2. Find the common chords of C and its relative minor, a.
3. Check the modulations of Ex. 1, finding those chords which are common to both keys.

★This modulation will be discussed at length in a following chapter.

A major triad may be I, IV or V of major keys. Spell major triads on various pitches and place them in three keys. See Ex. 3. This drill should accompany the keyboard practice.

Ex. 3.

I in F	I in A
IV in C	IV in E
V in B $\flat$	V in D
VI in A minor	VI in C $\sharp$ minor

Keyboard Practice.

1. Play a major triad in four parts. Employ it successively as I, IV and V and make a cadence.

2. Play the following patterns. The model is given in C but the student should begin in other keys.

(1) I V $_7$ | I I | G:IV | I V $_7$ | I || (2) I V $_7$ | I V $_3$ | G:I | ii V $_7$ | I || (3) I V $_7$ | I IV | C: | B $\flat$:V | I V $_7$ | I ||

A minor triad may be i and iv in the minor mode, and ii, vi, and iii in the major mode. Refer to Ex. 4.

Ex. 4.

i in d	i in g
iv in a	iv in d
ii in C	ii in F
iii in B $\flat$	iii in E $\flat$
vi in F	vi in B $\flat$

Keyboard Practice.

1. Play a minor triad in four parts. Employ it successively as i; as iv, ii, iii, vi and make a cadence.

2. Refer to Ex. 4. Starting in d minor, employ the tonic (i) of that key as the iv in a minor and continue in that key. Employ any one of the minor triads for any other and modulate. In general, follow the "natural" order of chord progressions.

A modulation may be effected by taking any chord in key for another diatonic. Ex. 5 shows the C chord taken as another diatonic.

Ex. 5.

G:IV F:V e:VI c:i

Bb:ii Eb:vi Ab:iii g:iv

Write original phrases modulating by common chord as indicated in the keyboard patterns. Several models follow.

Ex. 6.

a minor iv 3
ii of C

Melodies to Harmonize.

The melodies of Ex. 7 include modulations thru common chord. The shorter ones are given for practice rather than as models which would be used in larger forms. The keys are not indicated but the common chords are marked.

F: d:

Bach

Summary.

In modulating from any key to the supertonic key (a large second above) the following are possible: employ ii as a new i; iii as ii; V as IV.

In modulating from any key to the mediant key (a large third above) the following are possible: employ iii as a new i; vi as iv; I as VI.

In relation to any given key, the supertonic key is the relative minor of the subdominant; the mediant is the relative minor of the dominant. These keys are said to be in the second degree of relationship to the original key.

Chart of Related Keys.

The following exercises will provide experience in modulating to keys of the second relationship, as listed in the preceding chart.

Combined Melodies and Figured Bases

Add a bass and two other voices in the first phrase, and write a melody with two other voices above the bass of the second phrase. Endeavor to achieve a unified effect by employing rhythmic and melodic figures suggested by the material given.

Ex. 7A

1.

Note the five measure phrases. Harmonize in three voices.

2.

Add three voices above the given basses.

3.

Chapter II.

Modulation thru the Diminished Seventh ($vii^{\circ 7}$)Saint-Saëns : *The Swan*

Ex. 8.

Play Ex. 8 and note the means of modulation. The excerpt is the second phrase of the composition, the first phrase being in the key of C major. The chord marked (*) is built upon the seventh degree of the minor scale (harmonic form). See Ex. 9.

Ex. 9.

What type of third is found in this chord? What interval is found from root to fifth; from third to seventh? The interval from root to seventh is a *diminished seventh*, being a half step smaller than a small seventh. Because of this characteristic interval the chord is termed a *diminished seventh chord*. This name refers to the species or type of chord and *not* to its key relation. Diminished-7th chords can be constructed on various scale degrees by chromatic alterations, but the only one which is diatonic is that built on the seventh degree of the harmonic minor scale. It is marked $vii^{\circ 7}$.

Drills.

1. Spell diminished seventh chords from many pitches, thinking *three small thirds* in succession, as: $g\#-b-d-f$.
2. Construct a diminished seventh chord upon the scale seventh in all minor keys.
3. Name the scale degrees in the $vii^{\circ 7}$ and resolve them according to the principle of tonal magnetism.
4. Play Ex. 10 and continue it.

Ex. 10.

It is possible to modulate from a key to any other thru the $vii^{\circ 7}$. After establishing the original key, enter the new key thru $vii^{\circ 7}$, preferably on a

weak pulse, altho this is not necessary. Resolve the vii°_7 to the tonic. The resolutions will follow the principle of tonal magnetism, except that scale-4 may ascend to scale-5. Altho vii°_7 is diatonic only in the harmonic minor scale it may be employed in the major mode.

Keyboard Practice.

1. Modulate from C major or c minor to every key following the pattern of Ex. 11. At first use the root of vii°_7 in the bass. Later, try inversions. The voices should move smoothly, stepwise progressions being the most satisfactory. The pattern can be used for modulation from *any* key to *any* key. Employing bytones, particularly suspensions, helps to modify some of the more abrupt modulations.

new key

Ex. 11. $\begin{array}{c} 3 \\ 4 \end{array} \begin{array}{c} \text{I} - \text{V} \\ \text{I} - \text{vii}^\circ_7 \end{array} \begin{array}{c} \text{I} \quad \text{ii}^\circ_3 \quad \text{V}^7 \\ \text{I} \end{array} \parallel$

2. Play a diminished seventh chord in close position. Transform it into a V, by flattening any tone a half step. Resolve to the tonic.

Any tone of a diminished seventh chord may be the root. Taking each tone as root, name the key in which it would appear as vii°_7 ; spell the chord, making necessary enharmonic changes. See Ex. 12.

Ex. 12.

$e:$ $g:$ $bb:$ $c\#:$

From Ex. 12 it is seen that one may modulate to four keys with any diminished seventh chord. In Ex. 13 this principle is illustrated with four part harmony, using the chords of Ex. 12.

Ex. 13.

$e:\text{vii}^\circ_7$ $g:\text{vii}^\circ_7$ $Bb:\text{vii}^\circ_7$

It is often more satisfactory to transform the vii^o to V₇ by resolving the chord-seventh of the former. For example: when modulating from C major to d minor thru the vii^o of the latter key, allow the seventh of the vii^o to resolve first; the following chord, being a V₇, establishes the new key. See Ex. 14.

The following examples illustrate modulations to remote keys, employing vii^o—V₇ as the "pivotal" chords.

Original Work.

Write original four measure phrases and eight measure periods using vii° as the modulatory chord. When modulating to remote keys, care should be taken that the leading of voices is smooth. When progressing from tonic of the original key to the new vii° some of the voices will follow a chromatic melody line. In such cases the chromatic tones should follow their *natural tendency* in the old key until the new key is established. In Ex. 16, (b) is superior to (a).

Melodies to Harmonize.

Ex. 12.

1. 2. 3. 4. 5. 6. 7. 8.

Eb:

$\text{b}^\flat$ $\text{e: vii}^\circ_{70} \text{V}_7$ e: $\text{C: vii}^\circ_{70} \text{V}_7$

$\text{vi D: vii}^\circ_{70} \text{V}_7$

C: IV-7 $\text{vii}^\circ_{70} \text{Db V}_7$

Analysis

The following excerpts show the use of the diminished seventh in works from the pre-Bach period. In the example from Monteverdi's *Orfeo* the composer employs the dominant minor ninth ($Vb9$) which many theorists consider the basis of the $vii^{\circ}7$. In the history of harmonic theory, a large number of writers derive the diminished seventh from the ninth mentioned. In the excerpt from *Ballo della ingrata* the same chord appears without the root.

Ex. 17A

Monteverdi: *Orfeo* Monteverdi: *Ballo della ingrata*

In the Schütz example, the diminished seventh has the appropriate color for "miserere". The Marcello excerpt is rather unusual for its period.

Schütz (1625)

Benedetto Marcello

Rameau's theoretical explanations of the diminished seventh are exceedingly complicated, but his use of the chord in his compositions is simple and charming.

Rameau: *L'enharmonique*

Sequences of vii° —I are common, as are successive diminished seventh chords. Bach used such progressions often. His preludes, fugues, etc. abound in passages of diminished sevenths which foreshadow the brilliant passages in the works of Chopin and Liszt. See the d minor Prelude from Book I of the Well Tempered Clavichord. In Ex. 18 find the root of each diminished seventh chord; spell it and name the key in which it would be vii° .

Ex. 18.

Ex. 18 consists of four musical excerpts, each showing a sequence of diminished seventh chords. (a) Bach: A sequence of three diminished seventh chords in G major, with roots G, A, and B. (b) Mozart: A sequence of three diminished seventh chords in C major, with roots C, D, and E. (c) Franck: A sequence of three diminished seventh chords in B-flat major, with roots B-flat, C, and D. (d) Chopin: A sequence of three diminished seventh chords in D minor, with roots D, E-flat, and F. (e) Chopin: A sequence of three diminished seventh chords in A major, with roots A, B, and C. Each excerpt is written for piano and includes a key signature and a time signature.

Interesting modulations can be invented by using several diminished seventh chords in succession, resolving the last one to any one of four keys. Ex. 19.

Ex. 19.

Ex. 19 shows a sequence of three diminished seventh chords, each resolving to a different key. (a) Root D, resolving to D major. (b) Root B, resolving to B major. (c) Root F, resolving to F major. The sequence is written for piano and includes a key signature and a time signature. The text "etc." is written at the end of the sequence.

Analyze the following, noting the ascending chromatic bass line. Transpose into several keys at the piano.

6.

The following modulation from C major to F# major and back is "remote". In each case the new key is approached by vii⁷. Transpose at the piano into various keys.

Fill in the inner voices

Chromatic Harmony—Introduction.

As stated in previous chapters a chromatic chord is one which contains one or more tones foreign to the scale. Diatonic harmony is usually more sturdy and impersonal, while chromatic harmony is more colorful and to a great extent represents a composer's personality. Depending on the chromatic tones chosen, chords become either brighter or more sombre. It is important at all times to think of chords from this angle and to note their effective use in masterworks. Ex. 20 shows a simple "bell motive" of four tones, harmonized first with simple diatonic chords; then with various types of chromatic chords.

Ex. 20

(a) (b) (c) (d)

Primary Chords Secondary Chords Chromatic Harmony No definite tonality

In order to understand modern music one should possess a thoro knowledge of chords in regard to their *structure*. Much music is written with no definite tonality. The meaning of such passages is clarified when they are regarded merely as a "pattern" of variously colored chords. With this in mind it is important to classify the various chord structures by "species" (type). The four types of triads have already been learned. Seventh chords can be classified as in Ex. 21.

Species of Seventh Chords.

Ex. 21.

(a) (b) (c) (d) (e) (f)

First Second Third Doubly Diminished Fourth (with large 7th)
Dissonant Seventh

- (a) First species: major triad with small seventh.
- (b) Second species: minor triad with small seventh.
- (c) Third species: diminished triad with small seventh.
- (d) Doubly dissonant species: large third, plus diminished third, plus large third. Compare this with the first species.
- (e) Diminished seventh species: all small thirds. The seventh is diminished.
- (f) Fourth species: all four types of triads with large seventh. Many theorists do not regard these as real chords but as interval structures. Any one of the four sounds like a chord with a by-tone added.

In the succeeding chapters the various chromatic chords will be discussed in regard to *species*. The student need not drill upon all types at once, but as new altered chords are learned they should be classified. Eventually the student should be able to spell any species of seventh chord quickly from all pitches, and to recognize them aurally.

Chapter III.

Chromatic Alterations of the Tonic and Dominant.

The tonic chord is seldom chromatically altered. In fact, if the root is altered the tone center of the key is lost. In Ex. 22 the chord at (a) can be considered a tonic with root sharpened, but there is a decided feeling of modulation to $f\sharp$ minor. The altered dominant chord at (b) is common. In the latter what chord degree is altered? What type of triad is V with the chord-fifth sharpened?

Ex. 22. Schumann: Op. 68.

(a) (b) etc

In Ex. 23 what type of triad occurs at (a) and (b)? In what way is this triad similar to the dominant chord of Ex. 22?

Ex. 23. Schumann: Op. 68.

Key of A

The tonic and dominant triads with chord-fifth sharpened are both *augmented triads*. The figuring is I_+ and V_+ . The V_+ is heard more often than the I_+ . Listen for the V_+ in the opening measures of "At Dawning" by Cadman. The chord is somewhat sentimental in quality and easily becomes commonplace when used too often.

The V_+ usually resolves to I . The I_+ usually resolves to IV or to a chord which includes the scale-6th, since the chromatic tone in I_+ resolves to scale-6.

Sing the following patterns and memorize the sound of the altered chords. Play I_+ and V_+ while singing the melodies.

Ex. 24.
Melodies

Three parts

Four parts

C:

The V_+ includes $\sharp 2$ of the scale. This tone may occur in any voice when the triad is used. Ex. 25 shows the V_+ with the chromatic tone in each of the four voices.

Ex. 25.

When the 7th (fa) is added to V_+ the parts must be so arranged that the chromatic tone ($\sharp$ chord-5th or $\sharp 2$ of scale) is *above* the chord-7th as shown in Ex. 26. The chord may resolve either as shown at (a) or at (b). In one case the chord-7th resolves up, which is unusual. In the second case the third of the tonic is doubled. Either progression is found in the best music. The excerpt at (c) shows V_7+ over a tonic pedal.

Ex. 26.

(a) (b) * (c) *

Chopin: *Op. 23.*

Ex. 26A

1. In the first two measures fill in the bass and inner voices. In the last four measures add three voices, achieving a unified style for the entire exercise.

- *2. In the first phrase add soprano and alto. In the second phrase add the bass.

3. Add three voices (close position) in the treble staff.

*A solution of this exercise will be found in the APPENDIX.

Keyboard Practice.

1. Play the following groups in many keys:

I I+ IV I; $\overset{8}{I} \overset{8}{I+} \overset{5}{IV} \overset{3}{V_7} I$; I V+ I; I V₇+ I; $\overset{3}{I} \overset{5}{I+} \overset{3}{IV} \overset{5}{V_7} \overset{3}{V_7} I$;

$\overset{6}{I} \mid \overset{6}{I+} \overset{6}{IV} \mid \overset{6}{I} \overset{6}{V+} \mid I \parallel$

2. Transpose the exercises of the singing drills to various keys.

Melodies to Harmonize.

Employ I+ and V+.

Ex. 27.

More Unusual Alterations.

The tonic with small seventh (Ib_7) has already been discussed in connection with the subdominant harmony. What species of seventh chord is Ib_7 ? The resolution is almost always to IV or iv, and the progression suggests a modulation to the subdominant key, tho not necessarily so.

The tonic may appear with augmented root and small seventh ($\#Ib_7$). See Ex. 28. In the Brahms excerpt the chromatic tones, $\#I$ and b_7 , embellish the supertonic chord. The other examples illustrate the full chord, figured $\#i^o_7$. What species is this chord? Notice that its resolution is to ii.

Ex. 28.

Brahms Op. 90.

Warren: National Hymn (c) * Mendelssohn: Elijah

Find the various altered chords previously discussed in the following well-known melodies. These melodies are to be found in the Golden Book of Favorite Songs (Hall & McCreary Co.), Twice 55 Community Songs (C. C. Birchard) and Senior Laurel Songs (C. C. Birchard).

- | | |
|--|----------------|
| 1. Love's Old Sweet Song | $Ib7$ |
| 2. American Hymn | $\#i^{o7}$ |
| 3. Softly Now the Light of Day | $\#i^{o7}$ |
| 4. Integer Vitae | $I+$ |
| 5. Songs of Araby | $I+$ |
| 6. A Hope Carol | $I+, V+, Ib7.$ |

The V_7^{b5} and $\#v^{o7}$

The dominant-seventh chord with $b5$ th is rare. It is used in *second inversion* as shown in Ex. 29. The resolution is to the tonic. What species is this chord? Refer to the Introduction to Chromatic Harmony. Referring to (b) of Ex. 29 note that the intervals of V_7^{b5} in root position are as follows: large third—diminished third—large third. When the chord is inverted the diminished-3rd becomes an augmented-6th. Because of this characteristic interval the chord is often termed an *augmented sixth chord*. There will be further discussion of the augmented-6th chord in a later chapter.

Spell V_7^{b5} in key and also from any pitch by interval as: Large 3rd—Diminished 3rd—Large 3rd.

Ex. 29.

The dominant seventh chord with augmented root ($\#$ root) has been discussed in connection with the submediant harmony. Since the $\#$ root of V_7 resolves to scale-6, this form of the altered V_7 may resolve to any chord which includes the scale-6th. See Ex. 30. The chord is figured $\#v^{o7}$. What species is it? The $\#$ root is usually found in the bass and the resolution is almost always to vi. The progression suggests a modulation to the relative minor.

Ex.30

#v₇₀ vi #v₇₀ IV₃

Melodies to Harmonize.

The following melodies include I_{b7}, #i^o₇, #v^o₇ and V⁷_{b5}. In No. 6 use #v^o₇ and V⁷_{b5}, employing the chromatic tones to give movement when the soprano is static.

Ex.31.

1. 2. 3. 4. 5. 6.

#v₇₀ #i₇₀ IV₃ #v₇₀ #i₇₀

Creative Work.

Sing and write melodies over the following accompaniments. In general the chromatic tones should follow their natural tendency except when a skip is made *in the same chord*.

Ex.32.

1. 2. 3. 4. 5. 6.

#v₇₀ #i₇₀ IV₃ #v₇₀ #i₇₀

The musical score consists of four exercises, each on a single bass clef staff in 8/4 time. Exercise 2 (labeled '2.') shows a sequence of triads and dyads, some with accidentals. Exercise 3 (labeled '3.') features eighth-note patterns with various accidentals. Exercise 4 (labeled '4.') includes a key signature change from one flat to two flats and continues with eighth-note patterns.

Summary.

The most common altered forms of tonic and dominant harmony are the augmented triads, I_+ and V_+ .

When the seventh (fa) is added to the V_+ it is used *below* the chromatic tone. There are two diminished-7th chords, $\sharp i^{\circ 7}$ and $\sharp v^{\circ 7}$.

There are two forms of the V_7 which include the interval of a diminished third.

The latter is inverted and becomes an augmented sixth.

The V_7 with $\flat 5$ th is used in *second inversion* ($V_7^{\flat 5}$).

The $I\flat 7$ suggests a modulation to the subdominant key.

The $\sharp i^{\circ 7}$ suggests a modulation to the supertonic key.

Most of the chords listed in the foregoing Summary are represented in the following exercises.

Ex. 32A

1. Fill in the inner voices and transpose the example at the piano.

Exercise 1 consists of two systems of piano accompaniment in G major, 3/4 time. The first system has four measures with the following chords: $\begin{smallmatrix} 4 \\ 3 \end{smallmatrix}$, $\begin{smallmatrix} 4 \\ b3 \end{smallmatrix}$, 6, $b7$, and $\begin{smallmatrix} 9-8 \\ 4-3 \end{smallmatrix}$. The second system has four measures with the following chords: $\begin{smallmatrix} b7-6 \\ 5 \end{smallmatrix}$, $\begin{smallmatrix} b7-6 \\ 5 \end{smallmatrix}$, 6, and $5-6-7$.

2. Work out the following example in two voices (piano) making use of imitation.

Exercise 2 consists of two systems of piano accompaniment in B-flat major, 3/4 time. The first system has four measures with a melody in the treble and a bass line. The second system has four measures with a melody in the treble and a bass line. The bass line is continued in the third system.

Bass continued

Exercise 2 continued: Bass line in B-flat major, 3/4 time.

3. Add three voices to the following bass.

Exercise 3 consists of two systems of piano accompaniment in G major, 4/4 time. The first system has four measures with the following chords: $\begin{smallmatrix} 7 \\ 5 \end{smallmatrix}$, 6, 5-6, 6, $\begin{smallmatrix} 6 \\ 3 \end{smallmatrix}$, 6-7, and $\begin{smallmatrix} 4 \\ 3 \end{smallmatrix}$. The second system has four measures with the following chords: $\begin{smallmatrix} 4-5 \\ 3 \end{smallmatrix}$, $\begin{smallmatrix} 4-3 \\ 6 \end{smallmatrix}$, $\begin{smallmatrix} b7 \\ 5-6 \end{smallmatrix}$, $\begin{smallmatrix} b7 \\ 6-5 \end{smallmatrix}$, 8-7, 8-7, and $\begin{smallmatrix} 9-8 \\ 7-5 \\ 4-3 \end{smallmatrix}$.

Chapter IV.

Alterations of the Subdominant.

Chopin: Op.32, No. 3

Ex. 33.

The subdominant is altered more frequently than the tonic and dominant harmonies. The most common alteration of the subdominant in the major mode is made by flattening the chord-3rd. What scale degree is this? See Ex. 33. The minor subdominant is marked iv or $IV\flat_3$. It is often said that the iv is "borrowed" from the tonic minor. Several examples are included in the Analysis of Chapter XIII of Part I. The chromatic tone may be in any voice as shown in Ex. 34.

Ex. 34.

Sing the following patterns and memorize the sound of iv .

Ex. 35.

Keyboard Practice.

1. Play the following groups in many keys:

I iv I; I iv V₇ I; I iv I V₇ I; I I iv I V₇ I; etc.

2. Combine the progressions including iv with the chromatic chords of Chapter III.

I V+ I iv I; I I+ IV iv I V₇ I; I #v^o vi IV iv etc.

3. Arrange chord progressions including iv in accompaniment forms as in Ex. 36.

Melodies including iv.

In No. 2 try I+ in the second measure. It is also possible to use iv in the second measure, considering the first note an appoggiatura.

The Augmented-Sixth Chord on #4.

Analyze the chord at (*) of Ex. 38. It is the iv with augmented root (#root). Its location in scale is shown at (b). The interval from root to third is a *diminished thirde*. When the chord is in first inversion the

Before harmonizing the melodies of Ex. 42, transpose the three and four part exercises of the singing drills to various keys and analyze the following excerpts:

Ex. 41.

Beethoven: Op. 7

Beethoven: Op. 13

b $\flat$ minor:

Haydn: *Creation*

Wagner

Franck

B $\flat$:

Melodies to Harmonize.

Employ the augmented-6th form of iv and IV in these melodies. In several the $\sharp iv^7$ is possible. The starred notes indicate where these chords can be used.

Ex. 42.

One might harmonize the longer melodies of Ex. 43 in the usual way, then see where the augmented-6th form of the subdominant would be possible or better. For example: No. 2 might be harmonized I-V-vi-IV etc. or I-V-vi- $\sharp iv$ etc., the latter making the approach to cadence in a contrary direction.

The augmented-6th form of subdominant harmony is useful in approaching cadence by contrary motion, also to add power to the passage. It is a common way of expressing the heroic element. Wagner employed such effects in "Lohengrin."

In No. 5 it is necessary to have a tripled 5th in the I chord of measure seven. In No. 6, avoid a middle cadence by using I as ⁵a passing chord on the weak beat of measure four.

Ex. 43.

(*) In No. 7 employ a simple piano accompaniment rather than four part harmony.

Other Forms of the Subdominant.

Ex. 44.

In Example 44 the diminished seventh form of the subdominant harmony is shown. At (a) the chord is the iv_7 with $\sharp$ root and $\sharp 3$ rd. At (b) the chord is IV_7 with $\sharp$ root and $b7$ th. In both major and minor modes this form of the subdominant leads to dominant, sometimes I or i. The figuring is $\sharp iv_7^o$ for both modes. What scale chromatics are involved?

Spell diminished-7th chords on various pitches and place them in key as $\sharp iv^{\circ 7}$. For example: $d\sharp f\sharp a-c$ is $\sharp iv^{\circ 7}$ in A major and a minor.

Where have you found diminished-7ths in previous lessons?

Ex. 45.

The subdominant-7th chord in the major mode appears with $\sharp$ root. This is a third species chord and may be used in any inversion. It sounds like the major II^7 with a bytone. See Ex. 45.

Ex. 46.

The subdominant of the major mode with sharpened fifth is an augmented triad. Where have you found augmented triads in previous lessons? Since the chromatic tone ($\sharp 1$ of the scale) resolves to scale 2 (re), the IV^+ may progress to any chord which includes the scale 2nd. See Ex. 46. The chord is rarely used. It sounds like an embellishment of the supertonic as illustrated at (c).

Dargomijsky

Chapter V.

Alterations of the Supertonic.

The supertonic has the greatest number of chromatic forms; i. e., more chromatic alterations are possible than in the case of any of the other harmonies. The three most common forms are:

1. Supertonic with sharp third. (II or II_7). This chord has been discussed in Part I, Chapter XIV. It is a first species seventh. It may be used in the minor mode also. When II_7 is used in the harmonic minor scale, what two scale chromatics appear?

2. Supertonic with flat fifth ($ii^\flat$ or $ii_7^\flat$). This chord was also discussed in Part I, Chapter XIV. It is a third species seventh and is diatonic in the minor mode, chromatic in the major mode.

3. Supertonic seventh with sharp root and sharp third ($\sharp ii^\circ_7$). This is a diminished seventh chord. Refer to Ex. 47. What scale chromatics are found in $\sharp ii^\circ_7$? Since $\sharp 2$ is not a possible chromatic tone in the minor mode, the diminished seventh form of the supertonic cannot be used in that mode.

Ex. 47.

Singing Drills.

Sing the following melodies, three-part and four-part exercises, concentrating upon the *quality* of the supertonic chords. The II_7 is bright, the $ii_7^\flat$ more sómbre and the $\sharp ii^\circ_7$ somewhat vague. The latter chord, being constructed of intervals which are all similar in sound, is less definite in color than the other forms.

Ex. 48.

10. 11. 12. 13.

Analysis.

Find the chromatic forms of the supertonic harmony in the following songs:

1. How Can I Leave Thee - - - - - II_7
2. All Through the Night - - - - - II_7
3. Love's Old Sweet Song - - - - - II_7 (refrain)
4. My Bonnie Lies Over the Ocean - - - - - II (in the chorus)
5. Stars of the Summer Night - - - - - $\sharp ii^{\circ}_7$
6. Softly Now the Light of Day - - - - - $\sharp ii^{\circ}_7$
7. Sweet and Low - - - - - $\sharp ii^{\circ}_7$
8. Good Night Beloved (Pinsuti) - - - - - $\sharp ii^{\circ}_7$ (opening of 2nd phrase)

The II_7 , ii°_7 and $\sharp ii^{\circ}_7$ are used in any inversion. They progress to dominant or tonic. The chromatic tones usually follow their natural tendency. When $\sharp ii^{\circ}_7$ progresses to V or V_7 the chromatic tones of the former often move stepwise and in the opposite direction to their natural tendency. Refer to Ex. 49. The chromatic tones are seldom left by leap *except in the same chord* (d).

Ex. 49.

(a) (b) (c) (d)

$\sharp ii^{\circ}_7 V_7 6$

The various forms of the supertonic may be used consecutively as shown in Ex. 50. In such cases the chromatic tones do not resolve but progress stepwise.

3. Play the descending major scale with the following figured bass. Transpose into several keys.

4. Fill in the inner voices and transpose to other keys.

5. Add the inner voices and transpose to various keys.

6. In the following exercise, fill in the inner voices of the first phrase and complete the example.

Creative Work.

Sing and write original melodies over the following accompaniment forms. Invent original accompaniments from the chord progressions outlined in the keyboard practice.

Ex. 52.

1.

2.

Augmented-Sixth forms of the Supertonic.

Ex. 53.

(a) (b) (c)

Play Ex. 53 and note the supertonic chords marked (a), (b), (c). Spell these chords in root position and refer to Ex. 54. All three forms contain the interval of a diminished third. As stated in previous chapters, the diminished third is usually inverted and becomes an augmented 6th.

Ex. 54.

(a) (b) (c)

$\sharp \text{ii}^7_3$ II^7_5 $\sharp \text{II}^7_5$

(a) The supertonic-7th with sharp root. This chord is usually used in first inversion as shown at (a) of Ex. 54 and is figured $\sharp ii_7^3$. It resolves to iii , III or to I . Since the root is $\sharp 2$ of the scale, this form is not possible in the minor mode.

(b) The supertonic-7th with sharp third and flat fifth is used in second inversion and is the doubly-dissonant species. See (b). It progresses to V or I , and is used in both modes. In the minor mode but one chromatic alteration is necessary, the $\sharp 3rd$ ($\sharp 4$ of the scale). The figuring is II_7^5 in the minor mode, and II_7^5 in the major.

(c) The supertonic-7th with sharp root, sharp third and flat fifth can be used in any position or inversion, but it is more often found in the second inversion as shown at (c). It progresses to I or V . The figuring is $\sharp II_7^5$.

All three of the above chord forms are called augmented-6th chords when the interval of an augmented-6th is present. The chords at (a) and (c) sound like V_7 chords (first species). The form at (b) is doubly-dissonant species.

Analysis.

In the following excerpts find the augmented-6th forms of the supertonic harmony; spell the chords and identify them as sounding like a V_7 , or a doubly-dissonant species. Note the resolution of voices. Sometimes only one tone of the augmented-6th resolves, the other progressing irregularly. If one of the assertive tones resolves, the ear is satisfied.

Note how Mozart wrote a melodic figuration over the notes of an augmented 6-5-3 chord.

Mozart: *Sonata in F* (K. 533)

The image shows a musical score for Mozart's Sonata in F, K. 533. It features a treble and bass staff. The bass staff has a key signature of one flat (B-flat) and a common time signature. The melody in the treble staff is a series of eighth notes: F4, G4, A4, B4, C5, B4, A4, G4, F4. The bass staff shows the harmonic accompaniment, with a 6+5/3 chord (F4, A4, C5) and a 6/4 chord (F4, A4, C5). The 6+5/3 chord is labeled with a '6+' above a '5' and a '3' below. The 6/4 chord is labeled with a '6' above a '4' below.

Early theorists allowed only the second inversion of the doubly dissonant augmented-sixth chord, yet Kuhnau employed the first inversion of the chord, D-F $\sharp$ -A $\flat$ -C, in his Biblical Sonata, *The Combat of David and Goliath*. The chord, which must have sounded quite harsh in the days of Kuhnau, occurs at the point where the giant falls. This is an early example of the pictorial use of harmony.

Kuhnau: *Suonata prima* (1700)

Casca Goliath

The image shows a musical score for Kuhnau's Suonata prima (1700), titled 'Casca Goliath'. It features a treble and bass staff. The key signature is one flat (B-flat) and the time signature is common time. The melody in the treble staff is a series of eighth notes: D4, E4, F4, G4, A4, B4, C5, B4, A4, G4, F4, E4, D4. The bass staff shows the harmonic accompaniment, with a 6+5/3 chord (D4, F#4, A4, C5) and a 6/4 chord (D4, F#4, A4, C5). The 6+5/3 chord is labeled with a '6+' above a '5' and a '3' below. The 6/4 chord is labeled with a '6' above a '4' below.

Summary of Augmented Sixth Chords

The $\sharp iv$ or $\sharp IV$ is figured $6+$ in the traditional figured bass system.

It is called the "Italian Sixth".

The $\sharp iv7$ or $\sharp IV7$ is figured $6+$ and is called the "German Sixth".

The doubly dissonant supertonic (II⁷) is figured $\begin{smallmatrix} 6+ \\ b5 \\ 3 \end{smallmatrix}$ and is called the "French Sixth". The supertonic seventh with three alterations ($\sharp$ II⁷) is $\begin{smallmatrix} 6+ \\ b5 \end{smallmatrix}$

also called a French Sixth although the sound is different. There is no special significance to these names except from the historical standpoint. At an earlier period, however, theorists wrote at length about the merits and defects of the forms mentioned.

Italian	German	French	French
$\begin{smallmatrix} 6 \\ 3 \end{smallmatrix}$	$\begin{smallmatrix} 6+ \\ 5 \\ 3 \end{smallmatrix}$	$\begin{smallmatrix} 6+ \\ 4 \\ 3 \end{smallmatrix}$	$\begin{smallmatrix} 6+ \\ 4++ \\ 3 \end{smallmatrix}$

Figured Basses Including Augmented Sixth Forms

1. Complete the exercise and modulate through the circle of fifths as indicated.

Figured Bass notation for the exercise:

Measure 1 (G major): $\begin{smallmatrix} 4 \\ 2 \end{smallmatrix}$ 6 $\begin{smallmatrix} 6+ \\ 3 \end{smallmatrix}$

Measure 2 (C major): 6 4

Measure 3 (F major): $\sharp 4$ 2 6 $\begin{smallmatrix} 6+ \\ 3 \end{smallmatrix}$

2. Fill in the inner voices and continue as a sequence through at least the following keys: g-Eb-cb-Ab-f-Db.

Figured Bass notation for the exercise:

Measure 1 (G major): $\begin{smallmatrix} 6+ \\ 5 \\ 3 \end{smallmatrix}$ $\begin{smallmatrix} 6+ \\ 4 \\ 3 \end{smallmatrix}$ 7 $\sharp$

Measure 2 (Eb major): 4 2

Measure 3 (cb major): $\begin{smallmatrix} 6+ \\ 5 \\ 3 \end{smallmatrix}$ $\begin{smallmatrix} 6+ \\ 4 \\ 3 \end{smallmatrix}$ $\flat 7$

Measure 4 (Ab major): 4 2

Measure 5 (f-Db major): c

Melodies to Harmonize.

In the shorter melodies, Nos. 1 to 7, different forms of the supertonic may be employed. For example: No. 5 may be harmonized in at least three different ways, as indicated. In the longer melodies find the chromatic tones, spell all possible chords which include those chromatics and choose the most effective chord, considering its rhythmic position in the phrase. For example: in No. 13 the $g\sharp$ in measure two might be harmonized with $V+$, $\sharp ii^{\circ}7$ or $\sharp ii7$ to III . The latter is perhaps too suggestive of a modulation and would be preferable later rather than so early. The $g\sharp$ might also be harmonized with the Augmented-6th form ($\sharp II7$) but this would lead to I and a cadence where the rhythm demands continuity. Another example: in No. 11 the cadence in measures 7-8 might be harmonized in G major as $V+-I$, or in e minor as $\sharp iv7-V$. The first harmonization is not as strong as the second and not as much in keeping with the spirit of the melody. Discussion, as in the preceding examples, is of great importance and value in the class work in harmony.

*Suggestions for No. 13 will be found in the APPENDIX.

The Neapolitan-Sixth Chord.

Ex. 57.

Play Ex. 57. Note the altered chord at (b). What is the root? What type of triad? In which inversion? The first inversion of a major triad built on flat two of the scale is often called the *Neapolitan-Sixth Chord*. This name is of no great importance as it is not descriptive of the chord. In the minor mode only one alteration of the ii° is necessary, the $\flat\text{root}$. In the major mode two chromatics occur, $\flat\text{root}$ and $\flat 5^{\text{th}}$. The figuring is $\flat\text{II}$ in both modes. Sometimes the chord is marked $\text{N}6$.

Ex. 58.

The $\text{N}6$ ($\flat\text{II}$) usually progresses to V or I but it is free in its progression. Ordinarily the *chord third is doubled* since it is a primary tone (scale 4). However, the root or fifth may be doubled. The $\flat\text{II}$ chord is rarely seen in root position or second inversion. Refer to Chapter XII for examples.

Analysis.

In the following, spell the $\flat\text{II}$ chord and note the doubling, also the movement of the voices.

Ex. 59.

Melodies to Harmonize.

Ex. 60.

1. 2. 3. 4. e. VI

5. 6. a: f: VI

7. Harmonize the following aria from Verdi's *Ballo in Maschera* with a simple piano accompaniment of reiterated chords.

Musical score for "N6" in G major, 3/4 time. The score consists of four staves. The first staff is the melody, starting with a treble clef and a key signature of one sharp (F#). The second staff is the bass line, starting with a bass clef. The third and fourth staves are for the right and left hands of a piano accompaniment, both starting with treble clefs. The piece ends with a double bar line and repeat dots.

The following is an excellent summary of the various chromatic forms of the supertonic:

Ex. 61

Wagner: *Rheingold*

D:

Summary

The seventh of ii^7 (do) is not altered.

The chord-third is never flattened; the chord-fifth is rarely sharpened.

Answer the following questions by writing the chords on the staff.

This will summarize all the chromatic forms of the supertonic.

1. Which forms include one sharp? Two sharps?
2. Which form in the major mode includes one flat? Two flats?
3. Which form in the minor mode includes one flat?
4. Which form includes one sharp and one flat?
5. Which form has three alterations?
6. Which forms sound like V^7 ?
7. Which forms contain the interval of an augmented sixth?
8. What scale chromatics are used in forming the "French" augmented sixth?
9. The "German" augmented sixth based on the sharp subdominant is enharmonic with the "French" augmented sixth based on the sharp supertonic.

10. In the above example, observe that the German sixth includes the interval of a perfect fifth which is notated as a doubly augmented fourth in the French sixth.

Chapter VI.

Alterations of the Submediant and Mediant.

There are fewer alterations of vi and iii than in the case of ii. The most common chromatic form of both vi and iii is the major form, VI and III, which were discussed in Chapters XV and XVI of Part I. Ex. 62 shows good examples of these chords. What scale chromatic occurs in VI? In III?

Chopin: Op. 28, No. 7

Chopin: Op. 28, No. 11

Ex. 62.

The major submediant (VI) usually resolves to ii. The major mediant (III) usually resolves to vi or IV. Both chords appear as triads or as seventh chords. What species is VI₇; III₇?

Singing Drills

Ex. 63.

Find VI and III in the following well known melodies:

- 1 Third phrase of "Salut d'Amour" (Elgar).
- 2 First and third phrases of "Hope Carol" (David Stanley Smith).
- 3 Second and last phrases of "Crossing the Bar" (Barnby).
- 4 Third phrase of "Sleep, Noble Hearts" (Mendelssohn).
- 5 Last phrase of "Farewell to the Forest" (Mendelssohn).
- 6 First phrase of "Songs of Araby" (Clay).
- 7 Use of III in "Kye Song of Saint Bride" (Clokey).

The chord-3rd, being a chromatic tone in both VI and III, *should not be doubled*. When III₇ progresses to IV it is necessary to double the third of the latter chord. See No. 8 of the singing drills.

Keyboard Practice.

1. Play the following groups in four part style:

I vi VI ii V₇ I I III₇ IV ii₇ V₇ I I III₇ vi IV I V₇ I
⁷ ⁸ ⁵ ⁶
 I VI₇ ii ii I V₇ I

2. Transpose the exercises of the singing drills.

Other Forms of the Submediant and Mediant.

The #vi^{o7}.

A rather common form of the submediant is shown in Ex. 64. In this form the vi₇ appears with # root and # third. What species is this chord? The #vi^{o7} embellishes the V₇ chord. It may be used in any inversion. Notice the progression of the chromatic tones.

Ex. 64.

Find the #vi^{o7} in the following melodies:

1. First phrase of "America the Beautiful", tune "Materna" (Ward).
2. First phrase of "How Can I Leave Thee".

Major Triads—bVI and bIII.

A major triad built on b6 is often used in the major mode. This chord, bVI, is borrowed from the tonic minor. The progression was discussed in Chapter XV of Part I. See Nos. 4 and 12 of Ex. 193.

A major triad on b3 of the major mode is rare. Refer to Ex. 200 of Part I. The chord progression shown in Ex. 65 is employed by Debussy in "Clair de lune". The bIII chord is later written e-g#-b because of a modulation to E major.

Ex. 65.

Augmented Triads—bVI₊ and bIII₊.

The augmented triads built on b6 and b3 are rare. The bVI₊ may progress to I or V. The bIII₊ is borrowed from the tonic minor. The following examples suggest ways to employ these unusual forms:

Ex. 66.

C:

Augmented-sixth Forms.

The vi^7 with $\sharp 3rd$ and $b5th$ is an augmented-6th chord and is usually employed only when modulating. The iii^7 with $\sharp 3rd$ and $b5th$ is also an augmented-sixth chord and suggests a modulation. Ex. 67 shows these chords employed without a definite modulation, altho another key may be suggested.

Ex. 67.

VI^7 $b5$ III^7 $b5$

Melodies to Harmonize.

The following melodies include III , VI and $\sharp vi^{\circ 7}$. Each melody can be harmonized in several ways. Try the chromatic chords in different places. In No. 5 employ diatonic chords in the fore-phrase, chromatic chords in the after-phrase.

10. Mendelssohn

Creative Work.

Write original melodies over the accompaniment form of Ex. 69. The student should now be able to invent original accompaniments from the various chord patterns given and write small compositions employing the chords of this chapter.

Ex. 69.

Summary.

1. The most common forms of the submediant and mediant are VI and III. The usual resolutions are similar to those already discussed in diatonic progressions.
2. The vi_7 with $\sharp$ root and $\sharp$ third is a diminished seventh chord and embellishes the dominant.
3. The augmented forms, bVI_+ and $bIII_+$, are rarely used. The $bIII_+$ is borrowed from the tonic minor.
4. The bVI is borrowed from the tonic minor and is more often seen than $bIII$.
5. Both vi_7 and iii_7 can be altered to the augmented-sixth form, suggesting a modulation.

Exercises combining melody and figured bass employing chords of the Summary.

Chapter VII.

Alterations of the Subtonic.

Chromatic forms of the subtonic are difficult to classify. They usually sound like forms of dominant harmony (with root omitted) or they suggest modulation. Play Ex. 70. At (a) the subtonic with $\flat 3^{\text{rd}}$ sounds like $V_7^{\flat 5}$ with root omitted. At (b) the subtonic with $\sharp 3^{\text{rd}}$ progresses to iii and sounds more like an independent chord because of the root relations which follow the "natural" order of progression.

Ex. 70.

The various alterations of the subtonic will be discussed in order, starting with the altered root.

1. The subtonic may appear with $\flat$ root. What type of triad is this? The $\flat VII$ progresses to subdominant harmony and suggests a modulation to the key of the subdominant, unless preceded and followed by chords which establish the original key. In Ex. 71 the progression at (a) is quite "modal" in quality. Since the subtonic (leading-tone) is altered, the tonality of the passage is vague. The example at (b) remains in the key but is suggestive of the minor mode.

Find the $\flat VII$ in "Matona" of Lassus. This example is No. 156 in Twice 55 Community Songs, No. 2.

Ex. 71.

2. The subtonic with $\flat 3^{\text{rd}}$ was shown in Ex. 70. It sounds like $V_7^{\flat 5}$ with root omitted. This chord is used in first inversion (vii). The chord-5th (scale 4) is doubled because it is a primary tone and because neither the leading tone nor the chromatic tone should be doubled. The subtonic with $\flat 3^{\text{rd}}$ sometimes includes a $\flat 7^{\text{th}}$, which is $\flat 6$ of the scale. Both $\text{vii}^{\flat 5}$ and $\text{vii}^{\flat 5 \flat 7}$ are augmented-6th chords.

3. The subtonic with #3rd always includes a seventh (scale 6). It is used in the second inversion (VII₇) and progresses to iii, III or vi. What species is the subtonic-7th with #3rd₅? It is also an augmented-6th chord. The progression VII₇ to III suggests a modulation to the relative minor key, tho not necessarily so. Refer to Ex. 72.

Ex. 72.  Musical score for Example 72, featuring a treble and bass staff with a key signature of one flat. The score is divided into three measures labeled (a), (b), and (c). Measure (a) shows a sequence of chords in the bass staff and a corresponding melody in the treble staff. Measure (b) continues the sequence. Measure (c) shows a more complex chordal structure. The name "Handel" is written at the end of the staff.

3. Continue the following through the keys of F and D $\flat$.

Figured Bass line for Exercise 3:

Old English.

Summary.

Questions:

1. What species of seventh chord is vii^7 in the major mode? In the harmonic minor?
2. What scale chromatics are necessary to convert vii^7 to a first species seventh chord?
3. Which chord degree is altered in the two augmented-6th forms of the subtonic chord?
4. The vii^7 with $\sharp 3rd$ usually progresses to.....?
5. The vii with $\flat 3rd$ usually progresses to.....?
6. The $\flat VII$ suggests a modulation to the.....key?
7. } Which chord degree of vii^7 cannot be flatted?
 } Which chord degrees of vii^7 cannot be sharpened?

Chapter VIII.

Modulation thru Chromatic Chords.

Table of Chromatic Chords.

The following table of chromatic chords (Ex. 76) is included as a summary of the work in preceding chapters and to serve as a basis for the discussion of modulation which follows.

In Ex. 76 the chords are grouped according to the *type* of triad or the *species* of seventh chord. Not every possible chromatic chord has been included, as several which are theoretically possible are practically never used. Several chords in the table are open to question as *strictly chromatic chords* since they so definitely suggest a modulation. The table includes *chromatic chords only* and second species sevenths are omitted, since they are almost always diatonic.

Group 1. Major triads (#3rd) and First Species Sevenths.

Ex. 76. 

Group 2. Third Species.

Group 3. Diminished Sevenths.

Group 4. Doubly-dissonant Species.
(aug. 6th). Used in 2nd inv.

Group 5. Aug. 6th chords
sounding like V7.

Group 6. Augmented Triads.

Group 7. Major Triads
(exclusive of Group 1).

Group 8. Aug. 6th chords (triads).

Group 9. Diminished Triads
(seldom used without the 7th).

Modulation.

The possibilities of modulation thru chromatic chords are practically limitless. There is space for only a few examples. The student will learn by experiment. More facility will be gained by writing short originals based upon the models rather than by harmonizing given melodies.

Referring to Group 1, note that there are five first species seventh chords in a major key. Any one of these may be taken for another and a modulation effected. For example: the VI^7 may be used as a VII^7 . In Ex. 77 this progression is illustrated in a period. The VI^7 of E major becomes the VII^7 of D major. In the afterphrase the VII^7 of D is employed as the VI^7 of the original key.

Ex. 77.

$VI^7 = VII^7$
E D

$VII^7 = VI^7$
D E

In Ex. 78 a modulation is made by using diminished-7th chords, both being chromatic. The $\sharp vi^{\circ 7}$ of F major becomes the $\sharp vi^{\circ 7}$ of A^b major. In the second phrase the process is reversed, $\sharp vi^{\circ 7}$ (A^b) employed as $\sharp vi^{\circ 7}$ (F).

Ex. 78.

$\sharp vi^{\circ 7} = \sharp vi^{\circ 7}$
F A^b

*
#vi⁷° = #ii⁷°
Ab F

In Ex. 79 a modulation is made from C major to e minor and back to the original key thru a third species chord. The #iv⁷ of C becomes the ii⁷ of e.

Ex.79.

The doubly-dissonant species (shown in Group 4) can be used for modulation. In Ex. 80 the II⁷ of c minor is taken as III⁷ of B $\flat$ major. Returning to c minor, the III⁷ of B $\flat$ is employed as II⁷.
 $\flat^5$ $\flat^5$

Ex.80.

The augmented-6th chords which sound like V⁷ are useful for modulation. By *enharmonic notation* a V⁷ can be used as any one of the augmented-6th chords shown in Group 5. In Ex. 81 at (a) the V⁷ of D $\flat$ major is enharmonic with the #II⁷ of C major. At (b) the V⁷ of C major is enharmonic with the #II⁷ of B major. At (c) the #ii⁷ of C major is enharmonic with the V⁷ of B $\flat$ major.

Ex.81.

etc.

Modulation thru the augmented triad is interesting and not overworked. Any one of the augmented triads shown in Group 6 can be used for another. In Ex. 82 the V_+ of $B\flat$ major becomes $\flat VI_+$ of A major. The doubling is important. It is better to avoid doubling the chromatic tone in either key. This can be accomplished by changing the arrangement of the voices.

Ex. 82.

$V_+ = \flat VI_+$
 $B\flat \ A$

By enharmonic notation any augmented triad can be V_+ in three keys. Refer to Ex. 83.

Ex. 83.

$G: V_+ \quad E\flat: V_+ \quad C\flat: V_+$

Ex. 84 shows the V_+ of G used as V_+ of $E\flat$ and vice versa. Notice the doubling and the movement of voices.

Ex. 84.

Ex. 85 illustrates modulations with chromatic major triads. The $\flat VI$ (Neapolitan 6th) is particularly useful for modulation.

Ex. 85.

(a) $IV: \flat II$ $\begin{smallmatrix} 3 \\ 3 \end{smallmatrix}$ (b) $a: N6=I$ $a: E\flat$ (c) $C: \flat VI=N6$ $\begin{smallmatrix} 3 \\ 3 \end{smallmatrix}$

Chapter IX.

The Augmented Supertonic (#2).

The augmented second of a key (#2) is a companion tone for #4, the two tones being very frequently used to embellish a tonic chord. Ex. 86.

Ex. 86.

Saint-Saëns. Mendelssohn.

A $\flat$:

#2 as root of a chord used in first inversion (major key) forms an augmented-sixth chord resolving on III, suggesting a modulation. Ex. 87 (a).

Ex. 87.

Schumann.

Wagner: *Tannhäuser*

#2 as a chord-3rd with #4 transforms a subtonic chord to a major triad. With chord-7th the chord is a first species seventh (VII $_7$). Ex. 87 (b).

Ex. 88.

Mendelssohn.

B $\flat$:

#2 as chord-5th changes the dominant from a major to an augmented triad. Ex. 88. In all chromatic chords the student should note the practice of great composers in regard to doubling. Ordinarily the chromatic tones are not doubled in fourpart writing. In Ex. 88 the five parts account for the doubling.

In the following example, the Rheingold theme is given as at (a); later when the Rhein Maidens had lost their gold, it appeared as at (b); still later when they asked for the return of the gold, the theme appeared as at (c). Note the use of #2.

Ex. 89.

Find #2 in the following excerpts and note its use as a chord-3rd. The Strauss excerpt illustrates the use of a tonic pedal point.

Ex. 90.

Strauss: *Reverie*

Wagner:

In different keys employ #2 as chord root, chord-3rd and chord-5th. Resolve the augmented-6th chords which include #2 on a tone taken as root, third, fifth, seventh, large and small ninth. Refer to Ex. 91.

Ex. 91.

Example 91 displays 21 numbered chord groups arranged in four staves. The first three staves are single-line staves (treble clef), and the fourth staff is a grand staff (treble and bass clefs). The chords are numbered 1 through 21, indicating a sequence of harmonic progressions. The notation includes various accidentals (sharps, flats, naturals) and stems, showing the specific intervals and voicings for each chord group.

The chord groups in Ex. 91 offer suggestions for original work. The student can expand any of the progressions into phrase or period forms. Ex. 92 illustrates the progressions in Nos. 2 and 12.

Ex. 92.

Example 92 illustrates two variations, (a) and (b), of chord progressions. The notation is presented in a grand staff (treble and bass clefs). Variation (a) shows a sequence of chords in the treble staff, while variation (b) shows a different sequence. The bass staff provides a harmonic accompaniment. The notation includes various accidentals and stems, and the progression ends with "etc." indicating further development.

Since the augmented fourth ($\sharp 4$) and small sixth ($\flat 6$) are both components of the subdominant and supertonic chords, it is easy to understand why the augmented sixth is seen in both. The choice of chord depends upon the relations in which they appear, as with the diatonic types. The augmented-sixth form of a chord may be used when the text requires more brightness, also variety of tone color.

Chapter X.

The Small Seventh ($\flat 7$).

In preceding lessons the small seventh ($\flat 7$) of the scale was employed as 7th of I demanding IV, also for modulation to the subdominant key. It is often used in the minor mode (natural form) when the melody descends in consecutive degrees.

In the following examples $\flat 7$ appears as root:

Ex. 93. Spohr: *Last Judgment*.

C:

2. Franck: *Organ Chorale*. 3. Debussy. 4.

Notice the consecutive second inversions in No. 2 of Ex. 93. When it is desired to emphasize the dominant quality of a I the chord-5th is doubled. In the excerpt mentioned, the second inversions are used as *passing chords* and the chord-5th is *not* doubled.

At (a) in the following example, both the large and small seventh occur in the same chord. The large 7th is the chord tone and the small 7th is a passing tone. At (b) the G, which is small 7th, is a passing tone.

(a) Wagner: *Tristan and Isolde*.

Ex. 94.

(b) Arensky: Op. 46

Ex. 95 shows the $\flat 7$ of G major taken as root of a dominant-9th chord. Continue the pattern at the keyboard until the key of G is again reached.

Ex. 95. Chopin: Op. 37

In Ex. 96, G, the $\flat 7$ of A major, becomes the 5th of a new tonic chord. The same progression occurs at the end of the excerpt where the $\flat 7$ of C major becomes the 5th of a new tonic.

Ex. 96. Wagner: *Parsifal*.

In Ex. 97 the small 7th is taken as seventh of a V_7 . At (b) the small 7th is taken as root of a V_7 .

Ex. 97. Sullivan.

If one has trouble in identifying the chords in the analysis, play them without the chromatic alterations. In learning to use chromatic tones, the same principle of chord relationship is followed as with the diatonic progressions in preceding lessons. Each tone can be taken as root, third, fifth, etc.; also as embellishing tone.

Note the use of $b7$ in the following:

Ex. 98. *MacDowell: Op. 51.

By permission of the publisher, Arthur Schmidt. V
Db:ii

Wagner: *Parsifal*.

Schumann.

The next example is interesting, not only because of its beauty, but because the tonality is so obscure:

Ex. 99. Wagner: *Tannhäuser*.

Melodies to Harmonize.

Employ the small seventh in harmonizing these melodies and write some others requiring modulations.

In No. 1 be careful to observe the sequences.

No. 2 is satisfactory with a simple accompaniment written over the given bass.

In No. 3 the passage beginning with $\flat 7$ can be written in unison for all voices.

No. 4 is unusual as it starts with the *iv* chord.

No. 6 is effective harmonized in the *natural minor*. The harmony depends upon the manner in which one phrases this melody.

Two ways are suggested in the following diagrams:

Ex. 100. German Choral

2. Old German Song.

3. Folk Song.

4. Russian Folk Song.

5. Reinecke.

6. Russian Hymn.

7. Rossini.

8. Alabieff.

9. Fill in the alto and tenor, noting that all chords are in root position, except those in measure two. The effect is modal.

10. Add two voices to the following bass.

Chapter XI.

The Augmented Fifth (#5).

#5 demands the scale-6th. When #5 occurs as root, the chord may progress to any chord of which the submediant tone is a component. In Ex. 101 at (a) #5 is root of a V_7 resolving on vi. At (b) the chord progresses to ii_7 . At (c) #5 appears as a chord-5th.

Ex. 101.

(a) Heller: Op. 45. (a) Schumann: Op. 68.

etc.

$\sharp v_7^o$ vi G: $\sharp v_7^o$

(b) Mendelssohn. (c) Schumann.

Note the use of #5 in the following exquisite excerpt. What chord degree is #5?

Ex. 102.

Delius: *Das Veilchen*.

As you sweet flow er,

Note the different species of seventh chords in this:

Ex. 103. Grieg: Op. 7.

In the following examples #5 appears as chord-3rd without a modulation:

Ex. 104. Wagner: *Rheingold*

2. Verdi: *Requiem*.

In Ex. 105 #5 appears as a passing tone and as root of a chord taken as a diatonic vii°_7 .

Ex. 105. Rameau-Godowsky: *Rigaudon*.

$\flat 6$, enharmonic with $\sharp 5$.

Modulation by means of the submediant chord on the small scale 6th ($\flat 6$) is very effective and interesting. Ex. 106 shows the diatonic VI of c minor taken as a diatonic I.

Ex. 106. Chopin: *Prelude.*

The score shows a modulation from C minor to A-flat major. The bass line starts with a C note, then moves to A-flat, which is enharmonically equivalent to G-sharp. The treble line features chords that reflect this key change.

Ex. 107 shows $\flat VI$ of E major taken as I of C major.

Ex. 107. César Franck.

The score shows a modulation from E major to C major. The bass line starts in E major with an E note, then moves to C, which is the root of the new key. The treble line features chords that reflect this key change.

The following example shows the seventh chord on $\flat 6$ taken as a new V_7 .

Ex. 108. Hamperdinck.

The score shows a modulation from A major to A-flat major. The bass line starts in A major with an A note, then moves to A-flat, which is the root of the new key. The treble line features chords that reflect this key change.

Here are some interesting examples of chromatic chords taken as:

1. Chromatic for a diatonic.
2. Chromatic for another chromatic.

Ex. 109. MacDowell: Op. 55. Schumann: Op. 68.

Ex. 110 shows the resolution of $\sharp 5$ on scale-6, the latter tone becoming a component of a chromatic chord which is taken as a new V_7 .

Ex. 110. Elgar.

In the following, the chromatic $\sharp v^{\circ} 7^{\circ}$ is taken as a diatonic $vii^{\circ} 7^{\circ}$.

Ex. 111. Beethoven: Op. 13.

e: vii°_7

With unlimited "borrowing" the following combination is possible and useful for harmonic color.

Ex. 112.

D:V

#5 as root with $\flat 7$ may be a component of an augmented-6th chord. This chord may be used for modulation to the supertonic key. Ex. 113.

Altho the following would rarely be used, harmonize them as indicated, employing an augmented-6th chord at the starred notes.

Swedish Folk Song.

*See Appendix for solutions of No. 3

Chapter XII.

The Small Second ($\flat 2$).

The small supertonic ($\flat 2$) is often seen as root of a chord, especially in the first inversion, when it is called the "Neapolitan Sixth." The chord-3rd is the best tone to double because it is a primary tone and the root is chromatic. However, the root or 5th may be doubled. In any case the progression is free. The $\flat II$ (Neapolitan Sixth) may be employed in either mode of the key, but it is more frequently found in the minor keys.

Ex. 116. Brahms: *Requiem*.

N6

As chord-3rd, $\flat 2$ occurs in an augmented-6th chord in first inversion. Ex. 117 (a). As chord-5th it is a component of an augmented-6th chord in second inversion (b).

Ex. 117. 8va Chopin: Op. 45.

F: vii (A6)
F3

The following is said to be an old melody of Brittany, used by Wagner in *Tristan and Isolde*: $\flat 2$ gives the sad, plaintive character needed for the text in that particular part of the drama.

Ex. 118.

f: etc.

Analysis.

The student should be able to find the different ways in which $\flat 2$ has been used in the following excerpts. It is interesting to note the chord relations. In the majority of cases, altho the chromatic tones destroy the original character of the harmonies, the *same progressions* occur as with the *diatonic chords*.

Ex. 119. 1. Reduced. Grieg.

2. Schumann: Op. 99.

3. Schubert. 4. Beethoven: Op. 106.

5. Rossini: *Stabat Mater*.

Wagner: *Tristan and Isolde*.

Grieg: Op. 8.

Schumann.

Gounod: *Faust*.

Ex. 120 shows an augmented-6th chord in root position. The interval of the augmented-6th is "hidden," as it does not occur from the *bass* to an upper voice.

Ex. 121. Chopin.

Ex. 121 shows a Neapolitan-Sixth ($\flat\text{II}$) over a tonic pedal.

Modulations employing $\flat 2$.

Ex. 122 shows $\flat 2$ as a component of an augmented-6th chord on the sub-tonic, taken as the supertonic in the key of F.

At (b), $\flat 2$ is a component of an augmented-6th chord, the root of which—by enharmonic change—becomes a dominant 7th, effecting a modulation to the key a diminished fifth away.

Ex. 122. Gounod: *Faust*. Beethoven.

A: $\text{vii}^7\flat_3$
F: $\#ii^7$

D: Ab:

A modulation may be made by taking any augmented-6th chord formed with $\flat 2$ for the $\text{IIA}6$ or the $\text{IVA}6$ of another key. Ex. 123.

Ex. 123.

F: II^7 $\text{A}6$ C: F: IV $\text{A}6$ C: Ab: II $\text{A}6$

Modulations may be made by taking the Neapolitan-6th chord as another chromatic chord or as a diatonic. Some of these were suggested in Chapter VIII. Ex. 124 shows the $\flat\text{II}$ taken as a new tonic.

Ex. 124. Beethoven: Op. 45.

In the following the Neapolitan-6th is taken as the supertonic, the subdominant, etc., as indicated.

Ex. 125.

1. 2.

3. 4.

c: $N6$ $Cb: II$ c: $N6$ $Ab: IV$

c: $N6$ $Gb: V$ c: $N6$ $F: bVI$

Note the beautiful modulation in the following example. The mediant chord is taken for a new tonic, and in the return to the original key (d minor) $b7$ is taken as $b2$.

Ex. 126. Wagner: *Parsifal*.

d: $F: bVII$ $d: N6$

Chapter XIII.

The Augmented Tonic and Submediant (#1 and #6).

The augmented tonic (#1) resolves on the supertonic (2). #1 may be employed as root, as 3rd and as 5th of a chord. In each case the chord may progress to any harmony which includes the scale-2nd. Refer to Ex. 128.

Ex. 128. (a) #1 as root. (b) #1 as 3rd. (c) #1 as 3rd. (d) #1 as 5th. (e) #1 as 5th.

Ex. 128 shows five examples of chords with #1 as root, 3rd, or 5th, and their resolutions. (a) #1 as root: #1, #3, #5, #7, #9, #11, #13, #15, #17, #19, #21, #23, #25, #27, #29, #31, #33, #35, #37, #39, #41, #43, #45, #47, #49, #51, #53, #55, #57, #59, #61, #63, #65, #67, #69, #71, #73, #75, #77, #79, #81, #83, #85, #87, #89, #91, #93, #95, #97, #99, #101, #103, #105, #107, #109, #111, #113, #115, #117, #119, #121, #123, #125, #127, #129, #131, #133, #135, #137, #139, #141, #143, #145, #147, #149, #151, #153, #155, #157, #159, #161, #163, #165, #167, #169, #171, #173, #175, #177, #179, #181, #183, #185, #187, #189, #191, #193, #195, #197, #199, #201, #203, #205, #207, #209, #211, #213, #215, #217, #219, #221, #223, #225, #227, #229, #231, #233, #235, #237, #239, #241, #243, #245, #247, #249, #251, #253, #255, #257, #259, #261, #263, #265, #267, #269, #271, #273, #275, #277, #279, #281, #283, #285, #287, #289, #291, #293, #295, #297, #299, #301, #303, #305, #307, #309, #311, #313, #315, #317, #319, #321, #323, #325, #327, #329, #331, #333, #335, #337, #339, #341, #343, #345, #347, #349, #351, #353, #355, #357, #359, #361, #363, #365, #367, #369, #371, #373, #375, #377, #379, #381, #383, #385, #387, #389, #391, #393, #395, #397, #399, #401, #403, #405, #407, #409, #411, #413, #415, #417, #419, #421, #423, #425, #427, #429, #431, #433, #435, #437, #439, #441, #443, #445, #447, #449, #451, #453, #455, #457, #459, #461, #463, #465, #467, #469, #471, #473, #475, #477, #479, #481, #483, #485, #487, #489, #491, #493, #495, #497, #499, #501, #503, #505, #507, #509, #511, #513, #515, #517, #519, #521, #523, #525, #527, #529, #531, #533, #535, #537, #539, #541, #543, #545, #547, #549, #551, #553, #555, #557, #559, #561, #563, #565, #567, #569, #571, #573, #575, #577, #579, #581, #583, #585, #587, #589, #591, #593, #595, #597, #599, #601, #603, #605, #607, #609, #611, #613, #615, #617, #619, #621, #623, #625, #627, #629, #631, #633, #635, #637, #639, #641, #643, #645, #647, #649, #651, #653, #655, #657, #659, #661, #663, #665, #667, #669, #671, #673, #675, #677, #679, #681, #683, #685, #687, #689, #691, #693, #695, #697, #699, #701, #703, #705, #707, #709, #711, #713, #715, #717, #719, #721, #723, #725, #727, #729, #731, #733, #735, #737, #739, #4141, #4143, #4145, #4147, #4149, #4151, #4153, #4155, #4157, #4159, #4161, #4163, #4165, #4167, #4169, #4171, #4173, #417

Ex. 131. 

Analysis.

Find #1 and #6 in the following excerpts. Note their use as chord-root; chord-3rd; chord-5th; or as bytones.

Ex. 132.  Chopin: *Prelude.*

 Wagner: *Tannhäuser.*

 Wagner: *Meistersinger.*

In No. 4 note the use of #1 as a bytone and as chord-3rd. #6 appears as a bytone. Notice the unusual melody line in the tenor voice.

 Schumann: *Op. 23.*

This excerpt from Bach is a good example of "borrowed" chromatic tones with the tonality remaining clear:

Bach: *Mass in B Minor*.

Schumann: *Op. 68*.

How well Debussy expresses the thought of expanding circles when Melisande drops her ring in the water:

Debussy.

Naught but a circle of water re - mains.

Modulations Employing #1 and #6.

Here we have #6 and #1 taken as #2 and #4, effecting a modulation to the dominant key:

Schumann: *Op. 68*.

Ex. 133.

In the following example an augmented-6th chord on #6 is taken as the #iv in C minor.
A6

Brahms: *Sonata.*

In No. 3 note the rather startling modulation from B $\flat$ to A thru the use of #6.

Beethoven: *Op. 10.*

The longer excerpts which follow are by two of the greatest masters of chromatic harmony. Notice that Bach's modulations coincide with the rhythmic divisions, while Wagner's occur continuously.

Bach: *Johannes Passion.*

Melodies to Harmonize.

Employ #1 and #6 in the melodies of Ex. 134.

Ex. 134.

Chapter XIV.

The Diminished Dominant ($b5$).

The diminished scale-5th ($b5$) is seen less often than any other chromatic tone. Modern writers use it more often than the old composers because they are more accurate in their use of symbols. Some theorists deny the possibility of $b5$ being employed as a component of a chord. Since one encounters this chromatic in the works of master composers, it will be discussed briefly here.

In the preceding lessons the small seventh ($b7$) was added to the tonic chord to create a demand for the subdominant. If a more somber color is desired, $b5$ may also be added to the tonic. This effect is heightened if the resolution is on the minor form of the subdominant. See No. 7 of Ex. 135.

From the excerpts the student has probably noticed that descending small seconds, especially in the lower and middle registers, produce the effect of pathos or gloom. Where the sharper tones are also employed, as in some of the examples, the effect is modified or neutralized.

$b5$ may appear as a bytone, or a harmony tone, as illustrated in the following examples:

Ex. 135. Grieg.

Wagner.

Elgar. 3.

In No. 5 the $\flat 5$ and $\sharp 5$ appear together as bytones. The $\flat 5$ is often written as $\sharp 4$.

Modulations Employing $\flat 5$.

At (a) the $\flat VI$ of A is taken as the dominant of another key with $\flat 5$ becoming the seventh of the new chord.

At (b), $\flat 5$ of the key of E becomes the seventh of the V_7 in F. This chord progresses to $\flat VI$ which leads to the key of $A\flat$ (enharmonic with the mediant of E). Such modulations were rather unusual in Beethoven's time.

At (c), $\flat 5$ of the key becomes the fifth of a chromatic supertonic chord in $E\flat$.

Ex. 136.

Beethoven: Op. 2.

A^b:

Summary.

Facts to Remember.

1. A chromatic tone may occur as a bytone, or as a harmony tone changing the mode of the chord.
2. A chromatic tone may effect a modulation, but not necessarily so.
3. A modulation is effected or complete when the altered chord resolves in the new key; *the chromatic tone then becomes diatonic*.
4. As the component of a chord, the chromatic tone usually gives the trend to the progression of the chord.
5. #1 as root, 3rd or 5th creates the demand for the supertonic chord.
6. #2 may be 1, 3 or 5 of a chord demanding the mediant harmony.
7. A chord with b2 as root is free in its resolution.
8. b2 as 3rd usually occurs in an augmented-6th chord demanding the tonic.
9. b3 changes the mode of the key.
10. As root, 3rd or 5th of a chord, #4 creates a demand for the dominant harmony. As root of an augmented-6th chord, #4 demands 1.
11. A chord containing #5 demands the submediant harmony.
12. #6 is rarely used, except as a bytone.
13. b6 suggests the minor mode of the key, but does not necessarily make it so.
14. As root, b7 is free in its progression. As chord 3rd, 5th or 7th it creates a demand for the subdominant harmony.

As stated before, by "demand" we mean the natural progression on the line of least resistance. The chromatic tones and chords may, and sometimes do, move otherwise, but the *demand* is the same, and the ear identifies them by this quality, rather than the actual progressions. Remembering the mental effect, one knows how and where to use the chords effectively.

Chapter XV.

Modulation by Common Tone.

The ways of modulating by common tone are almost numberless when one considers both the diatonic and chromatic tones in a key, and the fact that a given tone may be employed as root, 3rd, 5th, 7th or 9th of a chord, any one of which may be taken for the other; not only of the same chord, but 1, 3, 5, 7, 9 of other harmonies in other keys.

Thorough practice in modulation by common tone will gradually lead the student to a clearer understanding of modern music.

In the excerpt from Debussy, D is first the chord-7th, then root, small ninth, large ninth and third. Strictly speaking this is not *modulation*, since no key is confirmed. Each chord could resolve as V-I and make a cadence. Successions of dissonant harmonies which do not resolve are characteristic of Debussy's music.

Ex. 137. Debussy.

In the following examples modulation is effected thru a common tone and each key is confirmed. In the first three excerpts the common tone is a component of a triad. In No. 4 the common tone becomes the root of a seventh chord

In No. 1 the small 6th ($b6$) becomes the 3rd of a new tonic.

Ex. 138. Schubert; *Symphony in B minor*.

No. 2 shows shows the 3rd of A minor taken as 5th of the tonic of F major.

2.

A: F:

No. 3 shows the 3rd of the tonic taken as root of a new tonic. The second key is affirmed by the accented I, as discussed in preceding work. This can also be considered a *common chord modulation*, in which the chromatic III becomes the new tonic.

3.

Wagner: *Walküre.*

A: C#: A:

4.

Heller: Op. 119.

G:

In Ex. 139 the only common tone is $D\flat$, which is suspended over the V_7 of the new key.

B as 7th. 5th root F as root

In Ex. 143, note how the modulations by common tone are made.

In No. 1 notice how the motive a is repeated in different keys. Find the common tone which links these keys together.

Ex. 143.

Sinding: Op. 24.

As shown in No. 2, a melody tone sometimes resolves as expected, but the tone of resolution is taken as a component of the tonic of another key.

2. Humperdinck. 3. Mozart: Sonata in D. Moussorgsky.

Bb

Melodies to Harmonize.

The melodies include modulations by common tone as indicated:

(a) Common tone a component of triads in different keys.

Ex. 144.

1. $A_b:$ $G: vii^7$ $F: vii^7$

2. $A:$ $D_b:$ $F: IV A^6$

(b) From the V_7 to a new I :

3. $D:$ $F\#:$ $C:$ V_7 $E_b:$

(c) From V_7 to V_7 .

6. V_7 $A_b:$ V_7 V_7 $B:$ I $E:$ V_7 $B_b:$ $ii^9 F:$

*See Appendix for solution of No. 7.

Longer Melodies.

In the melodies of Ex. 145 analyze the form; note the modulations and the key relations, as well as sequences, etc.

Old French Song.

Ex. 145.

1. V_7 $A_b:$ V_7 V_7 $B:$ I $E:$ V_7 $B_b:$ $ii^9 F:$

2.

Müller.

Old German Song.

5. Himmel.

6. Fill in the inner voices and note the common tones used in the modulations.

Chapter XVI.

Modulation by Common Tone (Continued).

The various tones of V_7 may be suspended over the 3rd and 5th of another V_7 :

Ex. 146.

Successions of diminished seventh chords were discussed in Chapter II. Ex. 147 shows such a progression.

Ex. 147.

Moussorgsky.

Modulations can be effected thru a common tone from V_7 to vii°_7 ; from vii°_7 to vii°_7 ; from vii°_7 to V_7 , etc., as shown in the following examples:

Ex. 148.

B as root. B as 3rd. B as 5th. B as 7th. vii°_7 vii°_7 etc. vii°_7 V_7

Ex. 149 illustrates the progressions discussed above.

Ex. 149.

Wagner: *Tristan and Isolde*.

Find the common tones in the following excerpts and note the relation of keys.

In No. 1 a large ninth is taken for a small ninth.

In No. 2 an appoggiatura resolves on a tone taken as large ninth.

Ex.150. Ravel: *Miroirs*.

Eb: V₉ V₉ E: V_{b9} Ab: Db: V₉

Wagner.

Db: ii₉

Wagner: *Parsifal*.

Wagner: *Walküre*.

Enharmonic Modulation.

Modulations thru enharmonic changes are interesting and at times very subtle.

Ex. 151 (a) shows triads connected by common tone and with enharmonic changes. In each triad the root becomes the 3rd of the next chord. At (b) the small third of the tonic harmony is taken enharmonically as large 3rd of a V_7 .

Ex. 151. *Liszt.*

c: E: V_7

By enharmonic changes, a dominant-9th chord may appear in four different keys:

Ex. 152.

C: V_9 A: F#: D#:

The next example shows the root of the augmented-6th chord enharmonically taken as the seventh of a V_7 .

Ex. 153. *Dvorak: Requiem.*

Ex. 154 shows one of Wagner's changes to the key a large third below and back again. Debussy makes an abrupt change to the key a large third above the tonic and then by enharmonic change to the key a large third below the tonic.

Ex. 154. Wagner: *Tristan and Isolde*.

C: Ab:I

Debussy.

C: E: Ab:

In the following example, at (a) one chromatic chord is taken for another, and by enharmonic change the modulation is made from a flat to a sharp key. At (b) the two tonics are an augmented second distant.

Ex. 155. Wagner

Db: E:

Notice how different composers have effected modulations to a key one degree higher or lower. Find the common tones and state whether they are chord-root, 3rd, 5th, 7th, 9th, or bytones.

Ex. 156. Wagner

Ab: a:

Rossini: "Stabat Mater,"

Tr

C: Db: d:

This musical score for Rossini's "Stabat Mater" features a treble and bass staff. The treble staff begins with a second ending bracket (2.) and includes a trill (tr) in the final measure. The bass staff provides harmonic support with chords. Chord symbols C:, Db:, and d: are indicated below the bass staff.

C: a:

This section continues the musical score from the previous block. It shows the treble and bass staves with further melodic and harmonic development. Chord symbols C: and a: are indicated below the bass staff.

Elgar,

Reduced.

This musical score for Elgar's piece is presented in a reduced form. It consists of a treble and bass staff with complex chordal textures. The word "Reduced." is written below the bass staff.

No. 4 shows the augmented 4th of the scale resolving up a half step as expected, but in this case the tone of resolution is notated enharmonically and taken as third of a new tonic chord (measures two and three).

Rachmaninoff

Eb: b $\bar{b}$

This musical score for Rachmaninoff's piece features a treble and bass staff. The treble staff includes a sharp sign (#) above a note. The bass staff contains triplets (3) and a double bar line. Chord symbols Eb: and b $\bar{b}$ are indicated below the bass staff.

Ries: Op. 31.

Chopin: *Polonaise C minor.*

Cesar Franck.

The enharmonic change of the augmented-6th chord to a dominant-7th, and vice versa, has been given before. Any one of them may be taken for another and effect a modulation:

Ex. 158 illustrates several interesting and rather abrupt modulations with enharmonic changes.

Ex. 158.

Elgar. Wagner: *Parsifal*.

F: E:

Elgar.

In No. 4, notice the chromatic scale passage in the upper voice. Try harmonizing the chromatic scale in both soprano and bass.

6. Fill in the inner voices.

6 4 4 3 6 6 4 3 6 6 5

Chapter XVII.

The Twelve Tone and Six Tone Scales.

Successive dominant 7ths and 9ths have been quite common since Debussy. Note their use in the following excerpts:

Ex. 161.

Debussy: *Children's Corner*. Fauré: *Prison*.

Try progressions of V_9 to V_9 as indicated in Ex. 162.

Ex. 162.

A as root A as 3rd A as 5th A as 7th etc.

Elgar.

Ex. 163.

In Ex. 163 note the successive dominant 7ths and 9ths with no common tone. Such progressions cannot be analyzed in any key and are said to be written in the *twelve tone* scale. This is the same as the chromatic scale, in that it includes twelve half steps. The notation is not the same as the chromatic scale. Each tone is independent and may be written as a sharp, flat, etc., as desired. Usually when any combination of tones can be arranged in the traditional chord structure (by thirds) it is so written. The chords, however, have no relation to a tonic or dominant and are used in a perfectly free manner. In the Introduction to Chromatic Harmony it was said that much modern music is a pattern or design in which the chords have little or no key relation. They are employed as a painter would use bits of color to produce an impression. The most advanced types of chromatic progressions merge into the twelve-tonal system, the line of demarcation being almost imperceptible. Wagner, for example, usually gives one a sense of tonality, even with two or three chords. Debussy, however, writes progressions which do not belong to any key, in the older and stricter interpretation. It is interesting to create new tonal designs by using one type of chord in sequence, or by combining different species of seventh chords without any key relation. Refer to Ex. 164.

At (a) Debussy uses a series of third species chords. What chord line is indicated in the bass?

Ex. 164. *Debussy: Reflets dans l'eau.*

reduced:

At (b) note the sequence and the species employed.

Wagner: Tristan and Isolde.

At (c) note the large and small 7ths and 9ths.

The following example shows a progression of doubly dissonant seventh chords. Such tonal combinations are more dramatic and less smooth than successive ninths.

Practice in Twelve-tonal Progressions.

Harmonize the following, employing V_7 and V_9 only. The figures above the melody indicate the chord degrees. Try a bass in contrary motion.

In the following employ third species chords only:

Play the following sequences at the piano and continue them. They can also be written.

Ex. 168.

Ex. 169 shows the sequences of Ex. 168 arranged in pianistic forms. Play and write others and invent original progressions.

Ex. 169.

The Six Tone Scale.

The six tone scale, often called the "whole tone scale," is a contraction of the diatonic scale, the two half steps being reduced to one whole step. There are but two *different* six tone scales as shown in Ex. 170. Notice that at some point it is necessary to notate a large second as a *diminished third*.*

The whole tone scale was used particularly by Debussy and has been widely used since his time. When the chord progressions are kept strictly within the scale, monotony results, as the scale has little variety. Whole tone progressions are best employed in connection with other chords for variety in tone color. Ex. 171 shows a passage entirely in the six tone scale on C.

Passing tones may be used between the chord tones of an augmented dominant-7th (V_7^+) forming a whole tone scale. At (c) this progression is employed to embellish an otherwise ordinary cadence.

Passing tones may occur between the chord tones of a doubly dissonant chord, forming the whole tone scale. See Ex. 173. At (c) the II_7 is embellished by such a scale passage.

Ex. 173.

Analysis of Debussy's music will reveal many interesting uses of the whole tone scale.

Successions of augmented triads, as shown in Ex. 174, suggest the tonality of a whole tone scale.

Ex. 174.

Play the following passage in several keys. It comes from the opera, *The Stone Guest*, by Alexander Dargomijsky (1813-1869) who employed the whole tone scale and the augmented triad in a remarkably free manner long before Debussy.

E. 174A

Dargomijsky: *The Stone Guest*

There is an interesting passage from the Smugglers' Chorus in Act III of Bizet's *Carmen* which used a third species seventh chord progressing to an augmented triad.

Continue as a sequence at the piano. Also write the passage.

Ex. 174 B

Play the following example on several different pitches. Observe that it consists of augmented triads and the whole tone scale.

Ex. 174 C

Play a succession of augmented triads descending by half step against an ascending chromatic scale. The effect is quite similar to the passage from Wagner's *Siegfried* to be found in Ex. 175 of the next chapter.

Ex. 174 D

Chapter XVIII.

Twentieth Century Practices

The harmonic idiom of the present is characterized by an increasing use of dissonance and the absence of tonality, in the accepted meaning of the latter term. Ex. 175 (a), which is a reduction of the accompaniment to a song by Schönberg (Op. 6.), is composed of dissonant chords which do not resolve, but the tonality of F is suggested. Compare this excerpt with (b). Schönberg derived his earlier harmonic style from Wagner. Comparing (a) with any of Schönberg's later works will show how far he left the chromatic style behind. In his later compositions there was usually a total absence of key.

Ex. 175.

Excerpt (a) shows a piano accompaniment with a treble and bass staff. The treble staff contains a series of dissonant chords, while the bass staff provides a more melodic line. Excerpt (b) continues the style with similar dissonant chords and a melodic bass line.

Wagner: *Siegfried*

This musical notation shows a piano accompaniment for Wagner's *Siegfried*. It features a treble and bass staff. The treble staff contains a series of dissonant chords, while the bass staff provides a more melodic line.

Play Ex. 176. Analyze the species of each chord. The key of g minor is confirmed at the close of motive (a) but the sequence of dissonant chords is unusual. Continue the sequence at the piano. César Frank prepared the way for many of the modern harmonic ideas.

Ex. 176.

Excerpt (a) shows a piano accompaniment with a treble and bass staff. The treble staff contains a series of dissonant chords, while the bass staff provides a more melodic line. The notation is labeled (a) and César Franck.

Successive Dissonant Chords without Resolution.

Several dissonant chords can be connected sequentially as shown in Ex. 177. There is no tonality in such passages. Analyze the species of the chords, note the movement of voices and continue the pattern for several measures at the piano. From this keyboard practice the student can acquire the newer harmonic devices.

Ex. 177.

Ex. 178 illustrates progressions of dissonant harmonies which are held together only by a definite melodic line. In (a) note the fifths in both treble and bass staves of measure four. In (b) notice the descending augmented triads against an ascending melody line. The final chord includes an unresolved "added tone." (*)

Ex. 178.

Compare the three excerpts from "Nocturne" by Morton Gould, Ex. 179. At (a) the effect is rather primitive and rugged, due to the combination of perfect fourths and fifths. The chords of this passage are mostly second species sevenths. At (b) the effect is warmer and richer, due to the many *third species chords* and the augmented fourths and diminished fifths in the left hand part. At (c) there is an unusual cadential passage of chords built of perfect fourths and small sevenths. The final chord includes an unresolved bytone (*).

Ex. 179. (a)

The opening of "King David" by Honegger contains a beautiful passage of interval structures in fourths over a tonic pedal.

Ex. 181 illustrates several dissonant structures of contrasting intervals. At (a) the intervals in the treble staff all sound like small sixths altho notated as augmented fifths. The intervals in the bass staff are all augmented fourths. Notice in (b) that all the intervals of the first measure, except one, sound alike. The cadence measure defines the chord of C but the large and small scale second are added as unresolved bytones. At (c) the bass consists of chords built in fifths. There is no tonality, and the melody is unrelated to the accompaniment.

Morton Gould: *March*.

Ex. 181.

Play and transpose the patterns of Ex. 182.

Ex. 182.

Polytonality.

Polytonality means two or more different tonalities heard *at the same time*. The excerpt from "Rosenkavalier" by Richard Strauss, Ex. 183 (a), is not polytonal, but it is prophetic of the more advanced style where several keys are employed simultaneously. In this example, three unrelated keys are heard in rapid succession with no preparation. The next step is to employ several keys at the same time. At (b) a simple example of polytonality is shown. The melody defines the key of E, altho it is not entirely foreign to the chord of C major sustained beneath it.

Ex. 183. Strauss.

(a)

C:I E^b:I E:V7 I

5 5

(b)

A more advanced type of polytonality is shown in Ex. 184. Here the different keys are distinct. In (a) the I and V of D are employed against the same chords in G. At (b) the keys of E and B^b are used simultaneously. Later in the composition, Prokofieff reverses the passage, employing B^b in the treble and E in the bass.

Ex.184.

By permission of the publisher, Max Eschig, Paris.

By permission of the publisher, Breitkopf and Hartel, Leipzig.

Polytonality is much more effective in orchestral writing than in piano compositions. The various colors of the orchestral instruments modify the harsh effects caused by two or three unrelated tonalities. Honegger's "King David" contains some remarkable and effective polytonal passages.

The student can experiment by writing melodies over the accompaniments given in preceding chapters, having melody and accompaniment in different keys. Refer again to Ex. 181 (c) and to Ex. 189.

Atonality.

It is easier to define atonality than to classify any single example as definitely atonal. When a composition is written contrapuntally, allowing the individual melodies perfect freedom of movement, the harmonic combinations become so dissonant that they lose any resemblance to ordinary chords. The feeling for key is lost and *atonality* results. Ex. 185, altho not unusually dissonant, shows three melodic lines which pursue their way independently with no regard for either chord structure or key.

Ex.185.

*See an example based on this excerpt in the Appendix.

There is a prevailing opinion among harmony students that atonal writing is more or less "hit and miss." This is not true. Refer to Ex. 186. This passage is constructed with mathematical precision, yet the total effect is pleasing to many people. The arpeggio figure in each measure outlines a V_9 chord which suggests but does not confirm a key. The melody tone in each measure counteracts any feeling for key. The melody line consists of equal skips and has no tonality.

Ex. 186.

Milhaud: *Mazurka*.

From "Das Neue Klavierbuch," pub. by
B. Schott's Söhne, Mainz, (Germany)

Ex. 187 illustrates two excerpts from the same composition. At (a) the key of C is affirmed. A reduction showing the chord scheme is seen at (b). At (c), which is a development of the theme at (a), the effect is atonal. The chords in the bass can be classified by species but the melody is unrelated to them.

Ex. 187.

Bornschein: *Conférence*.

From "Das Neue Klavierbuch," pub. by
B. Schott's Söhne, Mainz, (Germany)

Play the patterns of Ex. 188. Analyze the interval structure minutely and note the movement of the parts. Transpose or continue in sequence. The patterns at (a) and (b) include familiar chord forms, while (c) and (d) are more dissonant applications of the same idea. At (e) and (f), which are arranged from Op. 26 of Hindemith, the effect is distinctly atonal.

Ex.188.

Ex. 189 illustrates an atonal effect in which a very clear melody line is accompanied by a progression of fourths, the latter having no harmonic relation to the melody.

Ex.189.

* Hindemith: Op.26.

By permission of the publisher, B. Schott's Söhne, Mainz (Germany)

In the following excerpt the melody is clearly in D major while the supporting harmonies are in a different key. This type of polytonality is less rigidly conceived than the Prokofiev example of Ex. 184 (b).

Ex. 189 a

Prokofiev: *Piano Sonata No. 8*

Ex. 189 B illustrates how a brief melody can be developed into a short composition. The fifths' of the first four measures are lengthened in duration to serve as an accompaniment to the melodic lines. The melody is from 'Three Burlesques' (No. 1) of Bela Bartok. The second phrase is an inversion of this melody and is followed by material suggested by the intervals of the original melody. Analyze the example to ascertain how unity was achieved. A student can learn how to manipulate the materials of contemporary music by basing his first experiments on themes from modern composers. Later his work will become more original and he may develop an individual style.

Ex. 189 B

V. J.

Grazioso

The musical score for Ex. 189 B, V. J., is in 3/4 time. It consists of three systems of staves. The first system has four measures, the second has four measures, and the third has four measures. The melody is in the right hand, and the accompaniment is in the left hand. The key signature has one flat (B-flat). The tempo is marked 'Grazioso'. The third system includes the markings 'molto rit.' and 'pp'.

Construct a short composition, employing the following melody by Zoltan Kodaly (Op. 11, No. 7) as a basis.

Ex. 189 C

The musical score for Ex. 189 C is in 4/4 time. It consists of two systems of staves. The melody is in the right hand, and the accompaniment is in the left hand. The key signature has one flat (B-flat).

Tone Clusters

Play Ex. 190 (a). The groups of tones in the first measure can be termed "tone clusters". They do not constitute a chord but are employed in the same manner as one would use chords.

As (c) the consecutive seconds in the treble staff suggest tone clusters but are incorporated with chords of conventional type, creating a pleasing but not unusual effect.

Ex. 190

Morton Gould: *March*

The musical score for Ex. 190, Morton Gould's *March*, is presented in three parts: (a), (b), and (c). The key signature is one sharp (F#) and the time signature is 2/4. Part (a) shows the piano introduction with treble and bass staves. The treble staff has notes labeled 'r.h.' and 'l.h.' with brackets indicating tone clusters. Part (b) shows a continuation of the piano introduction with similar notation. Part (c) shows a piano introduction with treble and bass staves, featuring consecutive seconds in the treble staff.

A tone cluster may vary from three or four tones to large groups as shown at (b). The latter include all the white keys between the extreme notes indicated by brackets. Where the flat appears (second measure of bass) the following cluster includes all the black keys.

In a high register, tone clusters are often very delicate and produce a charming effect. In a lower register they suggest a percussion instrument. The masses of sound produced at (b) are effective as a rhythmic device. When written for the piano, tone clusters are played with the fist, palm of the hand and the entire forearm. See the works of Leo Ornstein, Henry Cowell, the last number of Op. 26 by Hindemith, etc. The possibilities of tone clusters in orchestral writing are without limit. In piano music their use easily becomes monotonous unless reserved for dynamic climax and special percussive effects.

The Twelve Tone Row (or Serial) Technique

By Frederick Zomzely and Vincent Jones

Perhaps no innovation in music composition has made a greater impact on the course of twentieth century music than Schönberg's twelve tone row technique. Although the employment of a row had been touched upon previously by other composers, Schönberg's use of it as it first appeared in 1923 in his *Five Piano Pieces*, Opus 23, marked it as a unique procedure.

Basically, Schönberg's twelve tone row technique utilizes the twelve tone scale discussed in a previous chapter but not in the same manner. The twelve semi-tones of the chromatic scale are so arranged that an unusual melodic progression is achieved, constituting a row which may be manipulated according to certain definite restrictions. These restrictions were rather inelastic in the early period of the twelve tone row technique but became more relaxed by both Schönberg and his followers in the later period of this type of serial writing.

In writing in the style of the early period of this technique, once a sequence has been established, it must be adhered to until the end of the composition. No note in the row may be repeated out of its original order and all the notes of the row must be employed before the row is repeated. Both the melody and harmony of a composition depend upon the position of the notes in the row, for the latter can be used horizontally (melodically) and vertically (harmonically).

In arranging the notes in a row, the sequence should be established according to the individual composer's inclination but should be so written that the notes, if used harmonically, do not result in consonant chords. Thus, in the following row employed by Schönberg in number five of his *Five Piano Pieces*, any three consecutive notes used harmonically will be dissonant:

Ex. 191

The row may be employed in the melody of a composition without interruption, or, it may be divided between the melody and the harmonic parts. Ingenuity in the rhythmic patterns aids in lending variety to the row as is evidenced by the melodic line in the following use of the above row by Schönberg:

Ex. 192

Schönberg: *Five Piano Pieces, Op. 23, No. 5 (Waltz)*

©Copyright 1923-1951 by Wilhelm Hansen, Copenhagen
By Permission of the Publishers

The following example from the same composition illustrates how the row may be divided between a melody and its harmony.

Ex. 193

Schönberg: *Five Piano Pieces, Op. 23, No. 5 (Waltz)*

©Copyright 1923-1951 by Wilhelm Hansen, Copenhagen
By Permission of the Publishers

The row may be divided between as many voices as a composition requires. The following row is employed in a string quartet and the example given illustrates the division of the row between four voices.

Ex. 194

Row 1

Zomzely: *Quartet*

The musical score for Zomzely's Quartet consists of four staves. Each staff contains a sequence of notes, with numbers 1 through 12 placed above or below the notes to indicate their position in a specific row. The notes are written in a key signature of one sharp (F#) and a common time signature (C). The first staff starts with a treble clef, the second with a treble clef, the third with a bass clef, and the fourth with a bass clef. The notes are arranged in a way that demonstrates the use of a specific row across the quartet.

While the restrictions governing the use of the row according to the original intentions of Schönberg are rather rigid, the technique possible despite these restrictions lends itself to a great variety of effects. The same row may be used in different compositions. The following excerpt from an unaccompanied violin sonata employs the same row as the previous string quartet (Ex. 194).

Ex. 195

Zomzely: *Violin Sonata*

The musical score for Zomzely's Violin Sonata consists of two staves. Each staff contains a sequence of notes, with numbers 1 through 12 placed above or below the notes to indicate their position in a specific row. The notes are written in a key signature of one sharp (F#) and a common time signature (C). The first staff starts with a treble clef, and the second with a treble clef. The notes are arranged in a way that demonstrates the use of a specific row across the violin sonata.

In the previous example, notes are repeated but no note is taken out of its position in the row. In the following excerpt from an unaccompanied viola sonata, Krenek makes free use of repetition.

Krenek: *Unaccompanied Viola Sonata, Op. 92, No. 3*

Ex. 196

The musical score for Krenek's Unaccompanied Viola Sonata consists of three staves. Each staff contains a sequence of notes, with numbers 1 through 12 placed above or below the notes to indicate their position in a specific row. The notes are written in a key signature of one sharp (F#) and a common time signature (C). The first staff starts with a treble clef, the second with a treble clef, and the third with a bass clef. The notes are arranged in a way that demonstrates the use of a specific row across the viola sonata.

In the following excerpt the row appears clearly in the first violin part, accompanied by tones of the row in the other voices. The accompanying parts do not, however, exhibit the row in regular order. The student should derive the row from the Arabic figures in the score and write it in whole notes.

Ex. 197

Schönberg: *Fourth String Quartet, Op. 37*

The musical score for Ex. 197 is presented in two systems, each with four staves. The first system shows the first violin part with a sequence of notes marked with Arabic numerals 1 through 12. The other three staves (violin II, viola, and cello/bass) show accompanying parts with notes marked with Arabic numerals 1 through 12. The second system continues the sequence, with the first violin part showing notes marked with Arabic numerals 1 through 12. The other three staves show accompanying parts with notes marked with Arabic numerals 1 through 12.

Exercises in the Twelve Tone Row

1. Write four rows employing whole notes (a customary procedure) and in a sequence that will result in dissonant harmonies.

2. Write eight measure phrases employing the rows written in the previous exercise in the following ways: (a) melodically, (b) two part harmony, (c) three part harmony, (d) four part harmony as in a string quartet.

THE INVERSION AND RETROGRADE FORMS

Variety in both melody and harmony may be obtained by subjecting the row to a number of manipulations. By inverting the row a new series of notes is achieved. This is called the "mirror" effect. Whenever a note ascends in the original row, it descends in the inversion in conformity with the original interval, and likewise, an interval is "mirrored" upward in a like interval in the inversion. No distinction is made between a note and its enharmonic and both may be used interchangeably. As in the row, the inversion must be used in its entirety before it may be repeated or before a return to its original row is made.

The following example illustrates a row and its inversion.

*) Ex. 198

The example shows two musical staves. The top staff, labeled 'Row', is in treble clef and contains a sequence of 12 whole notes, numbered 1 through 12. The notes are: C4, D4, E4, F#4, G#4, A4, Bb4, C5, Bb4, A4, G#4, F#4. The bottom staff, labeled 'Inversion', is in bass clef and contains the inverted sequence of 12 whole notes, numbered 1 through 12. The notes are: C4, Bb3, A3, G#3, F#3, E3, D3, C3, Bb3, A3, G#3, F#3. The inversion is a perfect mirror of the row around the C4 line.

Additional variety may be obtained by writing each of the preceding examples backwards. These forms are called the retrograde, "crab" or "cancrizans" forms. As with the row, its alternate forms must be used in their entirety before they may be repeated. The various forms may be used consecutively or simultaneously in part writing.

*Three brief compositions based on the row of Ex. 198 and its alternates in Ex. 199 are to be found in the APPENDIX. The student is advised to attempt similar compositions.

The notes in any of the forms may be used in any octave position.

The following example illustrates the preceding row and its "mirror" form in their retrograde forms.

Ex. 199

Retrograde (or "crab") form of row

Retrograde (or "crab") form of the inversion

Exercise

Write the inversions and retrograde forms of the following rows.

Ex. 200

Example 201 illustrates the simultaneous employment of a row and its retrograde form: (The same row is used by Krenek for all twelve pieces in his Op. 83).

ROW

Twelve Short Piano Pieces, Krenek: Op. 83

Ex. 201

6. A Boat, Slowly Sailing

Krenek: Op. 83

The musical score for Ex. 201 is a piano accompaniment in 6/8 time. It consists of two systems of three measures each. The first system shows a melodic line in the right hand and a harmonic line in the left hand. Notes are labeled with numbers 01 through 08, and some are labeled with 'R' followed by a number (R1, R2, R3, R4, R7, R8, R9, R10, R11, R12). The key signature has one flat (B-flat).

Copyright 1939 by G. Schirmer, Inc.

Used by permission

The row and its retrograde form are used irregularly in the above illustration for neither is used in its entirety. Krenek designates the original form of the row by the letter O, its inverted form by the letter I, the retrograde of the row by the letter R and the retrograde of the inversion by the letters RI. In the present exposition these symbols will also be employed.

A more regular use of the row (Ex. 198) and its alternate forms as they may be used consecutively in a melody is the following example:

Ex. 202

The musical score for Ex. 202 shows four staves of a melody. The first staff is labeled (O), the second (I), the third (RI), and the fourth (R). The melody is in C major and consists of 12 notes. The notes are: C4, D4, E4, F#4, G4, A4, B4, A4, G4, F#4, E4, D4. The key signature has no sharps or flats.

Exercise

1. Write two original rows and employ them melodically, varying the octave positions of the notes.
2. Employ the rows written in the exercise on page 127 in melodies which will include their inversions and the retrograde forms.
3. Write eight measure phrases in two part harmony employing the following combinations: O-I; O-R; I-R; O-IR.
4. Write three part phrases with the following combinations: O-R-I; I-RI-R.
5. Write four part phrases with the following combinations: O-I-R-RI; R-IR-O-I.

Securing Greater Variety in the Row

In order to secure greater variety in using the row, one may transpose it to any step of the chromatic scale. In this manner, forty eight versions of the row and its alternate forms may be obtained. As before, in writing in the style of the early period of the twelve tone row, the form of the row in which one has begun to write must be completed before a transposition is essayed. The great variety of forms and the possibilities available when the notes in these forms are used harmonically, have made the Schönberg twelve tone row technique one that lends itself to a great deal of originality when applied to music composition.

An example of transposition occurs in the String Quartet of Webern. The basic row employed is the following one. Observe that this row is constructed in a less seemingly "haphazard" manner than is often encountered. The first four notes at (a) are used at (b) in transposed "mirror" form, and the last four notes at (c) are a transposition of those at (a).

Ex. 203 Row

Webern: Op. 28

In the third movement of the Quartet, Webern transposes the row up a diminished fifth and the first violin part then becomes the following:

Ex. 204

Webern: Quartet, Op. 28

Copyright 1939 by Hawkes & Son, London, Ltd.

Assigned to Universal Edition 1955.

Reprinted by permission of Associated Music Publishers, Inc., New York, N. Y.

Exercise

Transpose the following row up a major second, a perfect fourth and a perfect fifth and employ the resulting rows melodically in a thirty-two measure passage.

Ex. 205

Tendencies in the Later Use of the Row

The more recent tendency among composers using the twelve tone row technique is to break away from the rigidity of the row. This has been accomplished by repeating notes, by leaving out notes, by using the "mirror" effect for a few notes before the row is completed and by employing the retrograde form before the completion of the row. Other tendencies have been to permit consonant chords to develop by arranging the notes of the row in such a manner that this becomes possible. In his later works, Schönberg himself permitted consonance to enter into some of his compositions and occasionally omitted notes in the row.

The following example illustrates how Webern relaxes the rigid pattern of the row. First, he gives a complete statement of the row, then uses the last part of the retrograde form, and the first part of its retrograde form before he returns to a complete statement of the row.

Ex. 206

Webern: *String Quartet, Op. 28*

The first system of music consists of three staves. The top staff is a treble clef with a key signature of one sharp (F#). The middle and bottom staves are bass clefs with a key signature of one flat (Bb). The music is a retrograde of a row. The notes are: 9 (F#), 10 (G), 11 (A), 12 (Bb), 7 (F), 8 (G), 5 (A), 6 (Bb). The notes are grouped into pairs: (9, 10), (11, 12), (7, 8), and (5, 6). The label "Ret. of Row" is centered below the staves.

The second system of music consists of three staves. The top staff is a treble clef with a key signature of one sharp (F#). The middle and bottom staves are bass clefs with a key signature of one flat (Bb). The music is a row. The notes are: 1 (Bb), 2 (C), 3 (D), 4 (E), 5 (F), 6 (G), 7 (A), 8 (Bb), 9 (C), 10 (D), 11 (E), 12 (F). The notes are grouped into pairs: (1, 2), (3, 4), (5, 6), (7, 8), (9, 10), and (11, 12). The label "Row" is centered below the staves.

An example of the use of the "Mirror" form of the row before the completion of the row is found in Krenek's 12 Short Piano Pieces, Op. 83, No. 5 (see previous example of the row employed - Ex. 201).

Little Chessmen Krenek: Op. 83

Ex. 207

Copyright 1939 by G. Schirmer, Inc.

Used by permission.

Alban Berg, in his last work, the Violin Concerto, uses the twelve tone row technique with considerable freedom comparatively early in the history of the row. The row appears in its entirety in the fifteenth measure of the violin part of the concerto and is constantly altered. Consonance has been permitted to enter and the entire concerto is written with a great deal of imagination by this disciple of Schönberg. The basic row is the following:

Berg: *Violin Concerto*

Ex. 208

The Row

Ex. 209

The Mirror

Copyright 1930 by Universal Edition, Vienna.

Reprinted by permission of Associated Music Publishers, Inc., New York, N. Y.

It is interesting to observe that the first three notes which make a minor triad appear as a major triad in the mirror form, and that a third species seventh chord (measure two of the row) appears in the "mirror" form as a first species seventh. These "tonal implications" relate the concerto to more traditional harmonic progressions. The first section of the work closes with a chord derived from the first four tones of the row (G-B $\flat$ -D-F $\sharp$) which is clearly a fourth species seventh on the tonic of G minor.

It may be said that the Berg Violin Concerto is in the style and spirit of the twelve tone row but it is not an orthodox example of the original intent of Schönberg in this area. Rather, it becomes a prophetic work that foreshadows the future paths of the serial composers.

A more recent work, *A Solemn Music* (for band) by the American composer, Virgil Thomson, while employing the twelve tone row, has even less affinity with the original row technique of Schönberg. In Thomson's work, one finds a combination of serial writing and tonality. The row is used in but one dimension, horizontally, but not vertically. The twelve tone row as a harmonic device is abandoned in Thomson's composition. Major and minor triads are superimposed on a twelve tone bass. Also, more than one row is introduced. There is a simultaneous use of two rows in a number of measures in a contrapuntal manner. While there is a frequent suggestion of atonality, the work closes in a definite key: C minor. Thus, the row has lost much of the original Schönbergian direction in Thomson's work and has, in this instance, become an adjunct of traditional harmony.

Ex. 210

Thomson: *A Solemn Music*

Copyright 1949 by G. Schirmer, Inc.

Used by permission.

The above illustration indicates how Thomson employed triads over a bass consisting of a twelve tone row. The effect is somewhat like passages from Wagner's *Der Ring des Nibelungen*.

A new twelve tone row begins after the first eight measures in the upper voice while the first row continues in the bass. The following example illustrates the second row employed:

Ex. 211

Thomson: *A Solemn Music*

The use of additional rows is another departure Thomson has made from the early precepts of the serial writers. What was once a rather rigid technique, has become a very flexible mode of writing. In some cases, as in Thomson's *A Solemn Music*, the row has become but a vestige of Schönberg's original procedure.

SUMMARY

1. The twelve tone row, according to the original intent of Schönberg, consists of the twelve tones of the chromatic scale, so arranged that they constitute an original sequence devoid of consonance if the notes are used harmonically.

2. The notes of the row must be used consecutively and no note of the row may be employed out of its original order. The only repetition permitted is that of a note used consecutively.

3. The notes of the row may be used horizontally to create melodies, or vertically to produce harmony. There is no relationship observed other than that of one note to another.

4. The row may be inverted. This form is known as the "mirror" form or its inversion.

5. The row and its inversion may be written backward. These forms are called the retrograde, "crab" or "cancrizans" forms. As with the row, its alternate forms must be used in their entirety before they can be repeated. The various forms may be used consecutively or simultaneously in part writing.

6. The row or its alternate forms may be transposed to any of the twelve semi-tones of the chromatic scale.

7. The more recent composers of serial technique have been alternating parts of the row with the "mirror" form and the "crab" forms before completing the row in order to vary the melodic patterns.

There has been a tendency to make more frequent use of consonance than was the case with the early serial composers.

The present exposition of the twelve tone row technique is intended as a brief introduction to the Schönberg technique. For the serious student of serial writing it is suggested that the following works be consulted:

- Krenek, Ernst, *Studies in Counterpoint*, pp. ix - 35. G. Schirmer, Inc. New York. 1940.
- Leibowitz, René, *Schönberg and his School; the contemporary stage of the language of music*. Translated from the French by Dika Newlin, New York; Philosophical Library. 1949. pp. xxvi - 305.
- Reti, Rudolph, *Tonality, Atonality, Pantonality*, pp. xiii - 166. Rockliff, London. 1958.
- Ruffer, Josef, *Composition with Twelve Notes related to one another*. Translated by Humphrey Searle. pp. xiv - 218. Rockliff, London. 1954.

Conclusion

The preceding chapter is a mere outline of the various practices by twentieth century composers. No attempt has been made to justify any of the harmonic devices on aesthetic ground. Such a discussion would go far beyond the province of a text-book.

Having become conversant with the twentieth century trends in harmony, the student can judge for himself whether he cares to pursue any of the paths indicated. The material of music is constant but there are limitless possibilities in the manipulation of that material, for no art remains vital unless its horizon is continually enlarging.

APPENDIX

The APPENDIX includes solutions of exercises in the chapters of the text. In most cases the chords are not figured as the student will derive more benefit if he analyzes the examples himself.

Chapter I

Ex. 7a - No. 6

Musical score for Ex. 7a - No. 6, Chapter I. The score is in G major (one sharp) and 3/4 time. It consists of two systems of piano accompaniment. The first system has four measures, and the second system has four measures. The music features a mix of chords and moving lines in both the treble and bass staves.

Chapter II

Ex. 26a - No. 2

Musical score for Ex. 26a - No. 2, Chapter II. The score is in B-flat major (two flats) and 3/4 time. It consists of two systems of piano accompaniment. The first system has four measures, and the second system has four measures. The music features a mix of chords and moving lines in both the treble and bass staves, with a dotted line indicating a connection between notes in the second system.

Chapter IV

In the following example note the use of a tonic pedal-point in the first three measures whereas the figured bass employs a descending line. In both solutions observe that the Italian-sixth precedes the final cadence.

Ex. 43 - No. 5

Also try the following figured bass with the above melody.

Chapter V

Two solutions of the following exercise are given (first phrase only). The first is relatively simple while the second is more complex. What tempi are appropriate for the two examples?

Ex. 56 - No. 13

The following examples illustrate the various harmonizations which can be applied to the second phrase of Ex. 56 - No. 10.

The first harmonization includes ascending bass lines and relatively few chromatic chords.

The next example exhibits a descending chromatic scale line in the bass and more complex harmonies.

Following are several harmonizations of the first two measures of the above phrase. Observe that they increase in complexity.

The final harmonization is contrapuntal in nature and includes an exact imitation of the soprano voice by the tenor.

By a careful analysis of the foregoing harmonizations, the student should be able to increase his harmonic vocabulary and his technical manipulation of the materials.

Chapter VI

In the following note the use of $\sharp i^{\circ}_7$ in which the soprano tone* is an appoggiatura which resolves in an irregular manner.

Ex. 68 - No. 1

In the next solution the first phrase is harmonized with chromatics taken from the sharp side of the key, while the second phrase employs chromatics from the flat side and introduces the more unusual chords $\flat II$, $\flat III$ and $\flat VI$. These chords make the tonality more obscure.

Ex. 68 - No. 7

Chapter VII

Ex. 75 - No. 9

Chapter XI

Number 3 of Ex. 115 can be harmonized in three voices with an imitation of the soprano by the bass.

Ex. 115 - No. 3

The imitation can begin earlier as illustrated in the following, but the author considers the effect less satisfactory.

Chapter XV

In the solution of number 7 from Ex. 144, note carefully the common tones between dominant-seventh chords.

Ex. 144 - No. 7

Chapter XVII

Following is an elaboration of the chords suggested in Ex. 166. Patterns of this type can often become the basis of short compositions in the twelve tonal style. The student should experiment with progressions given in the text and compose original ones, developing them into small piano pieces.

Ex. 166

Chapter XVIII

The following passage in polytonality is based on the excerpt from Prokofiev Opus 38 found in Ex. 184. The same keys are used but the effect is relatively "mild" since there are many common tones and "clashes" are minimized. Observe that the keys employed often result in familiar chords which do not produce much "shock". The melodies in the treble staff are definitely tonal and the chords in the bass (I and V7) are equally clear, but their simultaneous use creates an effect never found in classical or romantic harmony.

The Twelve Tone Row

Following are solutions of the row in Ex. 198. The row, its inversion (mirror), the retrograde and the retrograde of the inversion are included here for the student's convenience in analyzing the solutions.

Row

Inversion (*mirror*)

1 2 3 4 5 6 7 8 9 10 11 12

Retrograde

1 2 3 4 5 6 7 8 9 10 11 12

Retrograde of mirror

1 2 3 4 5 6 7 8 9 10 11 12

In the first solution the first two measures employ the row strictly. The next three measures use both the row and its inversion simultaneously. The cadence is constructed of chords in fourths derived from the row and the inversion. No attempt has been made to follow the earlier rules about dissonance, and there are several effects which suggest a "tonal" treatment.

Alla marcia

1 2 3 4 5 6 7 8 9 10 11 12

Inv. 1 2 3 4 5 6

Row 1 2 3 4 5 6 7

Row 1 2 3 4 5 6 7

Inv. 1 2 3 4 5 6 7

Row 1 2 3 4 5 6 7

In the second solution there is a deliberate attempt to relate the row technique to traditional harmony and to create an "atmospheric" effect. The first two measures employ the row over a pedal point which is the first tone of the row. The next three measures use the retrograde over an elaborated pedal point. This leads to a final section which is the retrograde of the inversion harmonized by relatively familiar chords.

The cadential measures (10-13) employ tones from the row and its retrograde, culminating in a final chord which uses these tones vertically in the manner of a "tone - cluster". This type of technique may appeal to those who are not attracted by a rigidly logical treatment of the row technique.

Delicately 3 5 7 8 9 10 11 12 V. J.

1 2 4 6 Ret. 1 2 3 4 5

6 8 10 12

Retrograde of inversion - - -
